SAFETY INFORMATION

UC

CAUTION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer.
Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.
Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty.
If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.
Health & Safety Code Section 25249.6 - Proposition 65

This product contains mercury. Disposal of this material may be regulated due to environmental considerations.
For disposal or recycling information, please contact your local authorities or the Electronics Industries Alliance: www.eiae.org.

EW5

1. Safety Precautions for those who Service this Unit.

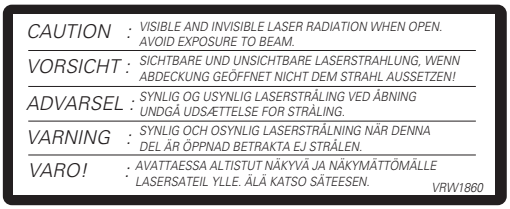
- **Follow the adjustment steps in the service manual when servicing this unit. When check ing or adjusting the emitting power of the laser diode exercise caution in order to get safe, reliable results.**

Caution:

1. **During repair or tests, minimum distance of 13cm from the focus lens must be kept.**
2. **During repair or tests, do not view laser beam for 10 seconds or longer.**

CAUTION
This product contains a laser diode of higher class than 1. To ensure continued safety, do not remove any covers or attempt to gain access to the inside of the product.
Refer all servicing to qualified personnel.

On the top of the player



WARNING!

The AEL (accessible emission level)of the laser power output is less than CLASS 1 but the laser component is capable of emitting radiation exceeding the limit for CLASS 1.
A specially instructed person should do servicing operation of the apparatus.

Laser diode characteristics

Wave length:
DVD:640~660nm
CD:770~810nm
DVD : 2.48mW(Emitting period :9sec.)
CD : 705μW(Emitting period : unlimited)

Additionla Laser Caution

Transistors Q1101 and Q1102 in PCB drive the laser diodes for DVD and CD respectively. When Q1101 or Q1102 is shorted between their terminals, the laser diodes for DVD or CD will radiate beam. If the top cover is removed with no disc loaded while such short-circuit is continued, the naked eyes may be exposed to the laser beam.

[Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol.
Please be sure to confirm and follow these procedures.

1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification(addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris.
Soldering should be finished with the proper quantity. (Refer to the example)

④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs.
In addition, be sure that there are no pinched wires, etc.

⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages.
If you find a damaged power cord, please exchange it with a suitable one.

⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries.
Please pay attention to your surroundings and repair safely.

2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification.
Adjustments should be performed in accordance with the procedures/instructions described in this manual.

3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance.
Make sure the proper amount is applied.

4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

● Service Precautions

[illegible]

● DVD section precaution

1. EJECT LOCK MODE for DVD mechanism.
   In order to enter "EJECT LOCK" mode, reset start while pressing "AV" and "V" keys together.
   Pressing the "AV" and "V" keys until monitor back light is turned on.
   In order to exit "EJECT LOCK" mode, follow the same steps to enter this mode.
2. Before disassembling the unit, be sure to turn off the power. Unplugging and plugging the connectors during power-on mode may damage the ICs inside the unit.
3. To protect the pickup unit from electrostatic discharge during servicing, take an appropriate treatment (shorting-solder) by referring to "the DISASSEMBLY" .
4. After replacing the pickup unit, be sure to skew adjustment.
5. During disassembly, be sure to turn the power off since an internal IC might be destroyed when a connector is plugged or unplugged.

1. SPECIFICATIONS

General

Rated power source ..... 14.4 V DC
(10.8 V to 15.1 V allowable)
Grounding system ..... Negative type
Maximum current consumption
..... 10.0 A
Dimensions (W × H × D):
DIN
Chassis ..... 178 × 100 × 165 mm
(7 × 3-7/8 × 6-1/2 in.)
Nose ..... 170 × 96 × 16 mm
(6-3/4 × 3-3/4 × 5/8 in.)
Weight ..... 2.9 kg (6.4 lbs)
HDD ..... 30 GB

Navigation

GPS Receiver:
System ..... L1, C/Acode GPS
SPS (Standard Positioning Service)
Reception system ..... 8-channel multi-channel reception system
Reception frequency ... 1 575.42 MHz
Sensitivity ..... –130 dBm
Position update frequency
..... Approx. once per second
GPS antenna:
Antenna ..... Micro strip flat antenna/ right-handed helical polarization
Antenna cable ..... 5.0 m (16 ft. 5 in.)
Dimensions (W × H × D)
..... 33 × 13 × 36 mm
(1-1/4 × 1/2 × 1-3/8 in.)
Weight ..... 105 g(0.23 lbs)

Display

Screen size/aspect ratio ..... 7.0 inch wide/16:9
(effective display area: 156 × 82 mm) (6-1/8 × 3-1/4 in.)
Pixels ..... 336 960 (1 440 × 234)
Type ..... TFT active matrix, transmissive type
Color system ..... NTSC
Operating temperature range
..... +14 °F to +122 °F
Storage temperature range
..... –4 °F to +176 °F
Angle adjustment ..... 0° to 21°
(initial settings: 0°)

Audio

Continuous power output is 22 W per channel minimum into 4 ohms, both channels driven 50 Hz to 15 000 Hz with no more than 5% THD.
Maximum power output ..... 50 W × 4
50 W × 2 ch/4 Ω + 70 W × 1 ch/2 Ω (for subwoofer)
Load impedance ..... 4 Ω (4 Ω to 8 Ω [2 Ω for 1 ch] allowable)
Preout max output level/output impedance
..... 2.0 V/1k Ω

Equalizer (3-Band Parametric Equalizer):
- Low
  - Frequency ..... 40/80/100/160 Hz
  - Q Factor ..... 0.35/0.59/0.95/1.15 (+6 dB when boosted)
  - Gain ..... ±12dB
- Mid
  - Frequency ..... 200/500/1k/2k Hz
  - Q Factor ..... 0.35/0.59/0.95/1.15 (+6 dB when boosted)
  - Gain ..... ±12dB
- High
  - Frequency ..... 3.15k/8k/10k/12.5k Hz
  - Q Factor ..... 0.35/0.59/0.95/1.15 (+6 dB when boosted)
  - Gain ..... ±12dB

Loudness contour:
- Low ..... +3.5 dB (100 Hz), +3 dB (10 kHz)
- Mid ..... +10 dB (100 Hz), +6.5 dB (10 kHz)
- High ..... +11 dB (100 Hz), +11 dB (10 kHz) (Volume: –30 dB)

HPF:
- Frequency ..... 50/80/125 Hz
- Slope ..... –12 dB/oct

Subwoofer:
- Frequency ..... 50/80/125 Hz
- Slope ..... –18 dB/oct
- Gain ..... ±12dB
- Phase ..... Normal/Reverse

DVD Drive

System ..... DVD-Video, Compact disc audio, MP3 system
Usable discs ..... DVD-Video, Compact disc, MP3
Region number 1
Signal format:
- Sampling frequency .... 44.1/48/96 kHz
- Number of quantization bits ..... 16/20/24; linear

Frequency response ..... 5 Hz to 44 000 Hz (with DVD, at sampling frequency 96 kHz)
Signal-to-noise ratio ..... 97 dB (1 kHz) (IHF-A network) (CD: 96 dB (1 kHz) (IHF-A network))
Dynamic range ..... 95 dB (1 kHz) (CD: 94 dB (1 kHz))
Distortion ..... 0.008 % (1 kHz)
Output level:
- Video ..... 1.0 Vp-p/75 Ω (±0.2 V)
- Audio ..... 1.0 V (1 kHz, 0 dB)

Number of channels ..... 2 (stereo)
MP3 decoding format ..... MPEG-1 & 2 Audio Layer 3

FM tuner

Frequency range ..... 87.9 MHz to 107.9 MHz
Usable sensitivity ..... 8 dBf (0.7 μV/75 Ω, mono, S/N: 30 dB)
Signal-to-noise ratio ..... 75 dB (IHF-A network)
Distortion ..... 0.3 % (at 65 dBf, 1 kHz, stereo) 0.1 % (at 65 dBf, 1 kHz, mono)
Frequency response ..... 30 Hz to 15 000 Hz (±3 dB)
Stereo separation ..... 45 dB (at 65 dBf, 1 kHz)
Selectivity ..... 80 dB (±200 kHz)
Three-signal intermodulation (desired signal level) ..... 30 dBf (two undesired signal level: 100 dBf)

AM tuner

Frequency range ..... 530 kHz to 1 710 kHz (10 kHz)
Usable sensitivity ..... 18 μV (S/N: 20 dB)
Signal-to-noise ratio ..... 65 dB (IHF-A network)

Note:

Specifications and design are subject to possible modifications without notice due to improvements.

2. EXPLODED VIEWS AND PARTS LIST

NOTES : • *Parts marked by "□" are generally unavailable because they are not in our Master Spare Parts List.*
• *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
• *Screw adjacent to▽mark on the product are used for disassembly.*
• *For the applying amount of lubricants or glue, follow the instructions in this manual. (In the case of no amount instructions,apply as you think it appropriate.)*

5. ELECTRICAL PARTS LIST

NOTE:

- *Parts whose parts numbers are omitted are subject to being not supplied.*
- *The part numbers shown below indicate chip components.*

  Chip Resistor

  RS1/○S○○○J,RS1/○○S○○○J

  Chip Capacitor (except for CQS.....)

  CKS....., CCS....., CSZS.....
- *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
- *Meaning of the figures and others in the parentheses in the parts list.*

  Example) IC 301 is on the point (face A, 91 of x-axis, and 111 of y-axis) of the corresponding PC board.

  IC 301 (A, 91, 111) IC NJM2068V

GGD1323	GGF1463 for repair	For repair

6.2 DVD ADJUSTMENT

● Skew adjustment

If any of the following replacements have been performed on the system, adjustments for pick up, must be conducted:

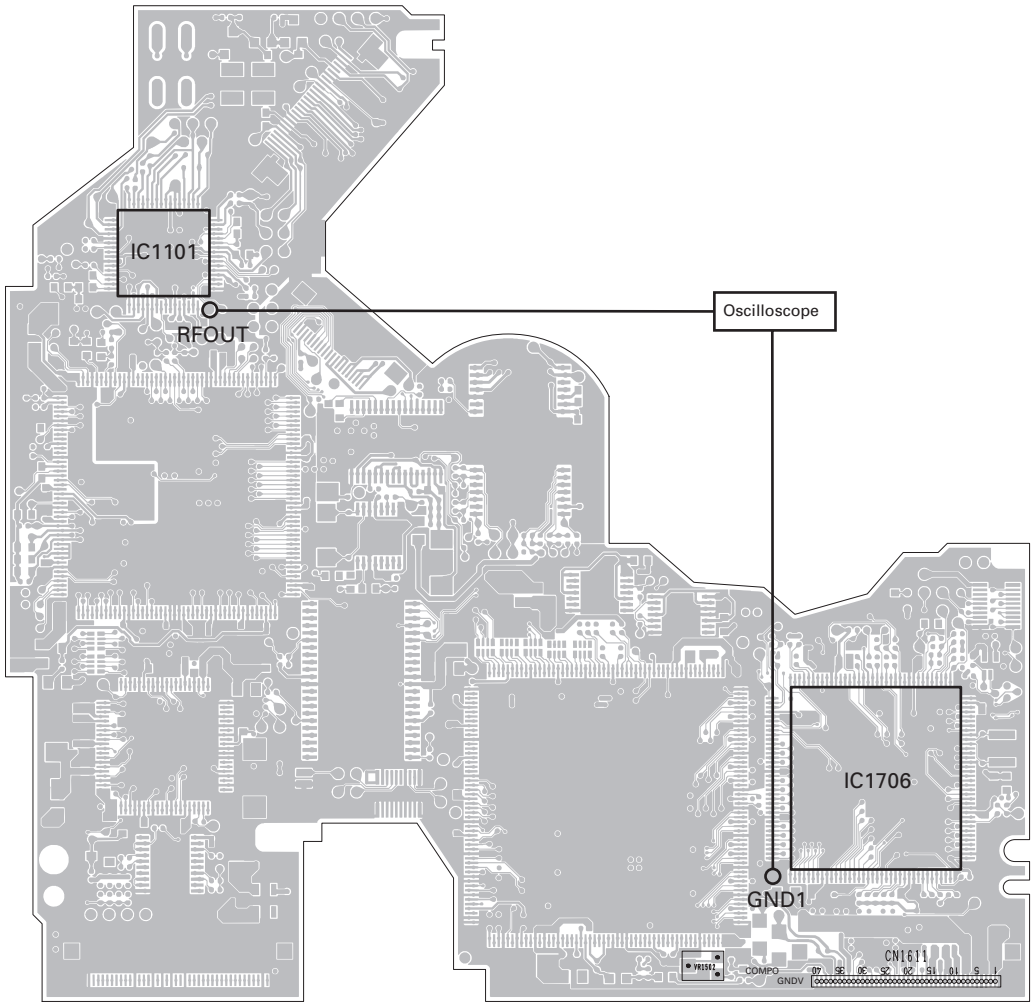
1. Pick up unit replacement
2. Spindle motor replacement
3. Carriage chassis replacement
4. Pick up unit main shaft replacement
5. Pick up unit sub-shaft replacement

Measurement device and tools : Oscilloscope
Allen key wrench
Screw rock(GYL1001)

Disk used : GGV1018
Measurement reference : GND1
Measurement point : RFOUT

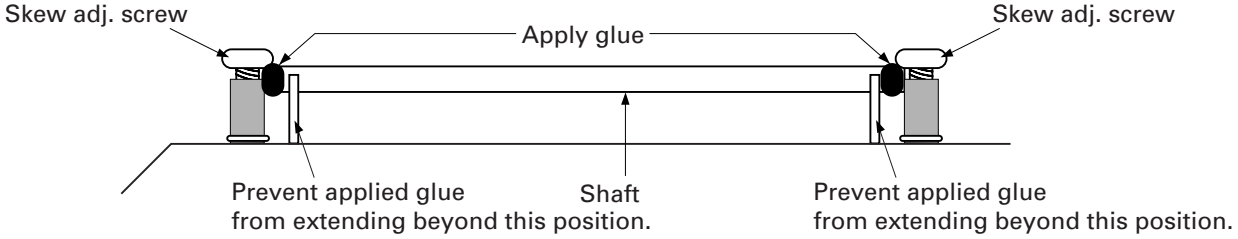
Skew adjustment connection diagram

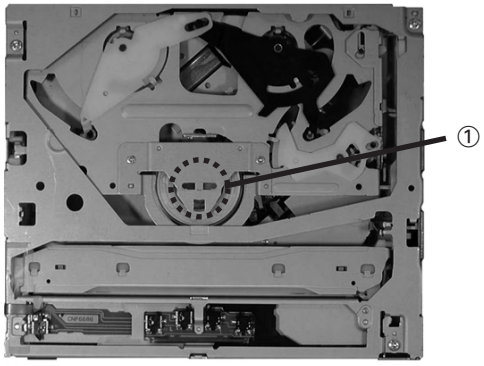
• DVD core unit (MS3)

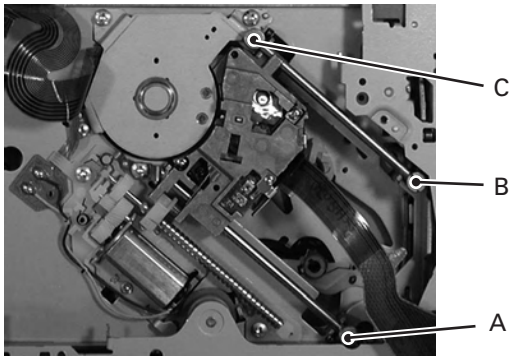


Symptoms in case of poor adjustment: Error efficiency deteriorated: 10^{-3} (Optimum value: 10^{-4} or lower)
High jitter of the RF signal RF waveform deformed
Unstable operation in tracking closing and servo control
Caution: Avoid exposing your eyes to laser beams for a long time.
Preparation for adjustment: Clean both ends of the shafts.
Use brand new skew screws supplied with the service kit GXX1259.

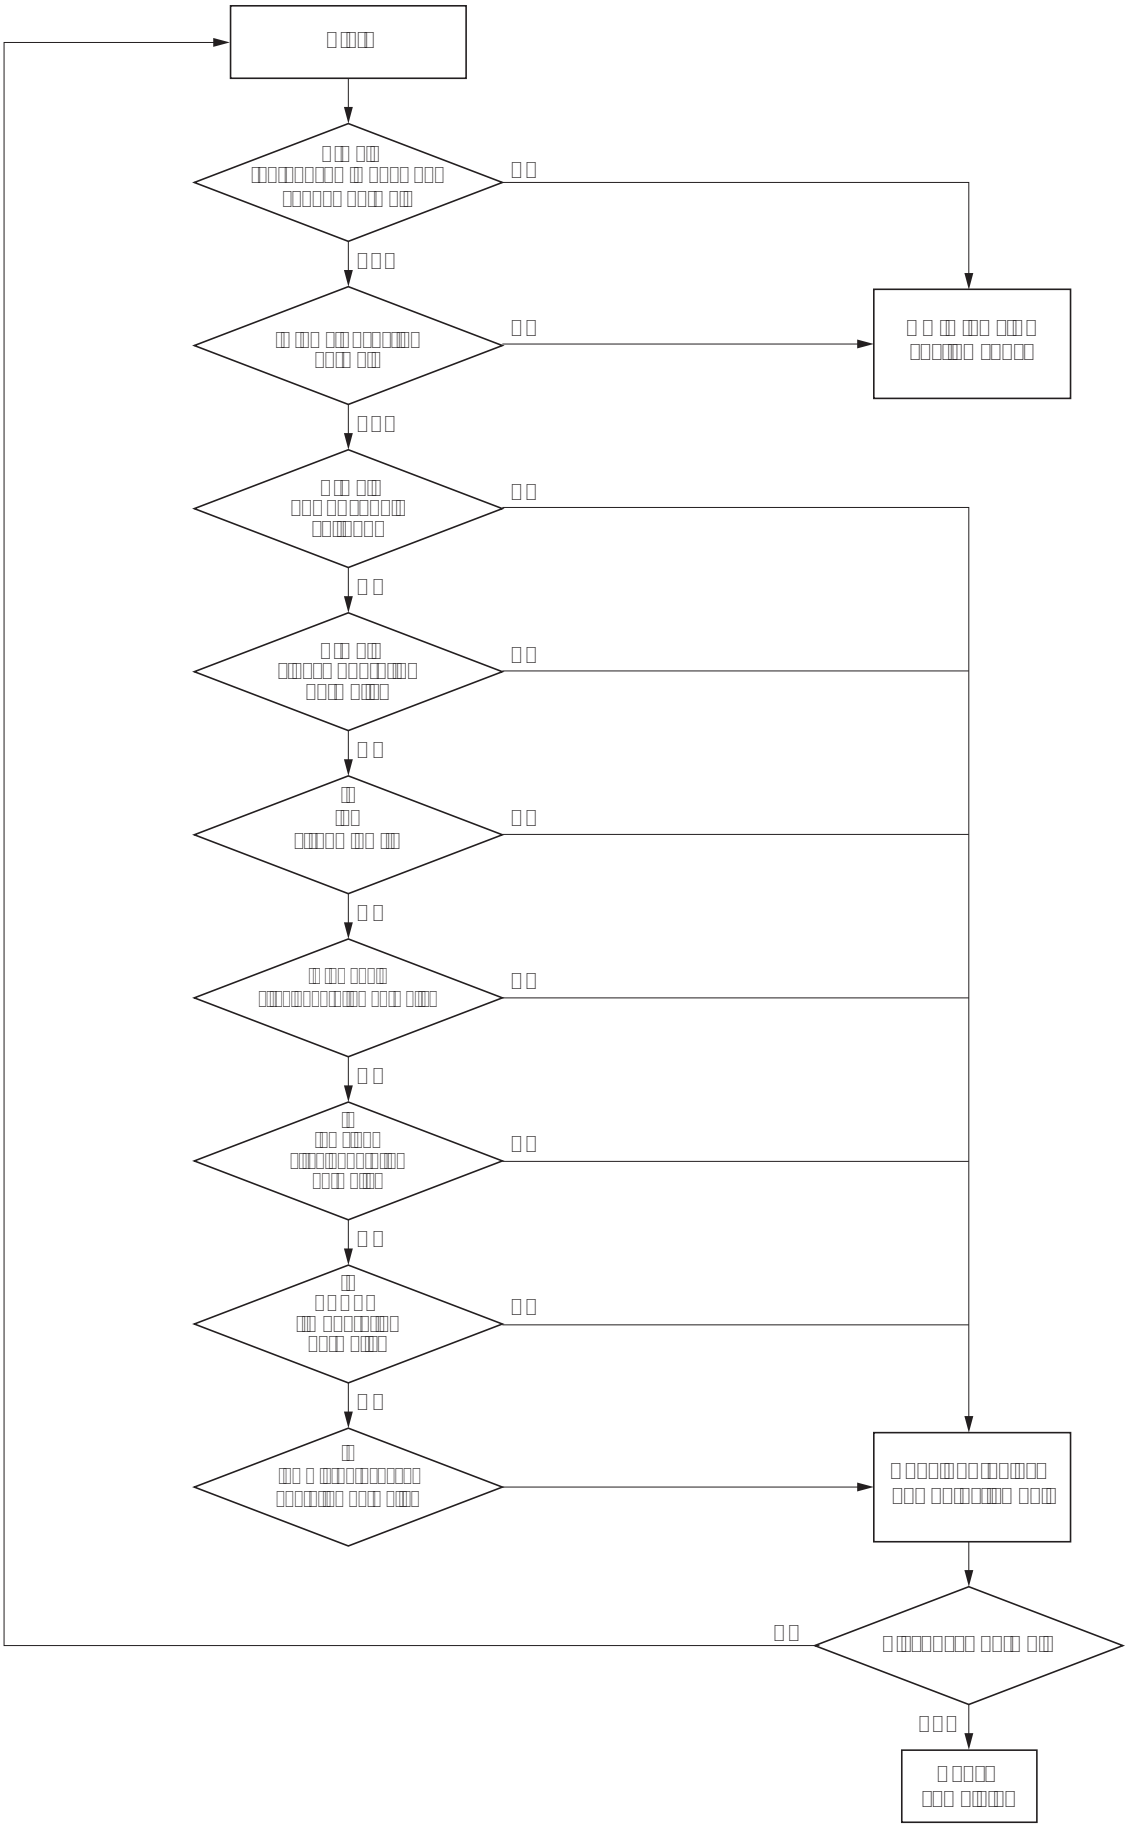
Procedures:
1. Place the DVD mechanism module upside down.
To avoid the disc from being robbed when it is turned upside down, first put a coin of about 1.5 mm on the table, then turn the disc upside down and set it so that the ① in the figure comes to the point immediately above the coin.
2. After replacing the pickup (by referring to the procedures of "Removing the Pickup."), roughly adjust the three skew screws through visual check so that the pickup is mounted in parallel to the CRG chassis around the inner and outer tacks.
3. Connect an oscilloscope as shown in the connecting diagram.
4. Turn on the power of the product. Load the test disc (GGV1018).
5. In the front-end test mode, set the disc type to DVD layer 1. Then, turn on the power. Move the pickup toward the inner tracks.
6. Turn on the laser diodes.
7. With the focus servo closed, complete all automatic adjustments. Close the tracking servo, and then complete all automatic adjustments.
8 Follow the next procedures, from 8-1 to 8-5, and adjust the (three) skew screws.
8-1 Move the pickup toward the inner track and turn the skew adjustment screw C so that the RF level of oscilloscope becomes the maximum.
(Tangential adjustment at the inner track position: Adjust the flatness of the disc at the inner track position with the adjustment screw C)
8-2 Move the pickup toward the outer track and turn the skew adjustment screw B so that the RF level becomes the maximum.
(Tangential adjustment at the outer track position: Adjust the flatness of the disc at the outer track position with the adjustment screw B)
8-3 Leave the pickup at the outer track position and turn the skew adjustment screws A and B in the same direction alternately one quarter at a time (A•B•A•B •••) so that the RF level becomes the maximum.
(Radial adjustment at the outer track position: Keeping the flatness at the outer track position, adjust the flatness of the whole disk with the adjustment screws A and B)
8-4 Move the pickup toward the inner track and turn the skew adjustment screw C so that the RF level becomes the maximum.
(Tangential adjustment at the inner track position: Adjust the flatness of the disc at the inner track position with the djustment screw C)
8-5 Repeat the steps from 8-2 to 8-4 three times, and adjust at the position where the RF level becomes the maximum.
9. Turn off the power in the test mode. After confirming that the disc has stopped, eject the disc.
10. Adjust with a screw rock the shaft and skew adjustment screw to the same state as initial one.







● Back end section check flow chart



Check 1: Are all power supply voltages normal?

Reproduce DVD-REF-A1 Title 1.

Verify the voltage of the sensing pin.

If results are not satisfactory, check to see if there are any problems with the resin flux cored solder, parts and components.

NO.	Verification location	Rated value	Unit
1	VD8-PGND	8±0.4	V
2	VD33-GND	3.3±0.3	V
3	SRVDD33-GND	3.3±0.3	V
4	VCC5-GND	5±0.25	V
5	AVCC5-GND	5±0.3	V
6	VCC33-GND	3.3±0.15	V
7	VCC18-GND	1.8±0.15	V
8	VCC25-GND	2.5±0.2	V

Check 2: Are all clocks operating normally?

Reproduce DVD-REF-A1 Title 1.

Checks are to be conducted with a GND reference.

If locations listed under "verification location 2", can be verified, there will be no need to perform verifications for the locations listed under "verification location 1."

If the result is not satisfactory, check to see if there are any problems with the resin flux cored solder, parts and components, in the vicinity of IC1507.

NO.	Verification location 1 (contact measurements)	Verification location 2	Media	Rated value1	Rated value 2	Rated value 3
1	CLK27	IC1503 96pin	ALL	2.65V~VCC33	GND~0.65V	27MHz±50ppm
2	EXTCK1	IC1503 100pin	DVD	2.65V~VCC33	GND~0.65V	36.8640MHz±100ppm
3	EXTCK1	IC1503 100pin	CD	2.65V~VCC33	GND~0.65V	33.8688MHz±100ppm

Check 3: Is the streaming I/F operating normally?

Reproduce DVD-REF-A1 Title 1.

Checks are to be conducted with a GND reference.

If the locations listed under "verification location 2" can be verified, then there is no need to conduct verifications for the locations listed under "verification location 1."

If the result is not satisfactory, check to see if there are any problems with the resin flux cored solder, parts and components, in areas where a problem occurs, for the overall sequence of"output "input"of the checked location.

NO.	Verification location 1 (contact measurements)	Verification location2	Verification Media	Rated value 1	Rated value 2	Reference waveform	Others

Check 4: Is the audio circuit operating normally?

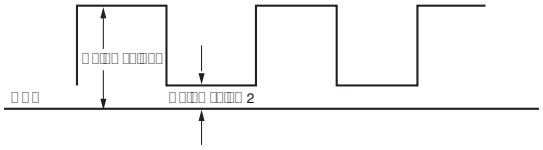
Reproduce DVD-REF-A1 Title 2 Chapter (48V/16-bit/1 kHz/0dB). Verify the circuit described in Figure 2.

Checks are to be conducted using GNDAU1 (sensing pins) as a reference.

If the locations, listed under "verification location 2", can be verified, there is no need to conduct verifications for the locations listed under "verification location 1."

If the result is not satisfactory, check to see if there are any problems with the resin flux cored solder, parts and components, in the vicinity of the main components.

NO.	Verification location 1	Verification location 2	Rated value 1	Rated value 2	Reference waveform
1	AOUT0	IC1503 90pin	2.0V and over	0.8V and lower	Waveform 3
2	SRCK	IC1605 1pin	2.0V and over	0.8V and lower	Waveform 3
3	LRCK	IC1605 3pin	2.0V and over	0.8V and lower	Waveform 3



Three serial output rated values

Checks are conducted with the measurement circuit below.

NO.	Verification location 1	Verification location 2	Rated value	Reference waveform
4	LO	CN1611 36pin	1100±150mV	Waveform 4
5	RO	CN1611 34pin	1100±150mV	Waveform 4

Check 5: Is the video circuit operated normally?

Reproduce DVD-REF-A1 Title 2 Chapters (White 100IRE).

Monitor the output with the oscilloscope, by setting the COMPO signal to a GND reference.

Set the Trigger mode to the TV trigger, and the Trigger line to line-150.

NO.	Verification location (sensing pin)	Rated value	Reference waveform
1	COMPO	1.0±0.05Vpp	Waveform 5

If the result is not satisfactory, check to see if there are any problems with resin flux cored solder, parts and components, in the vicinity of line-150 (the section marked ⑤ in the circuit diagram) and peripheral components.

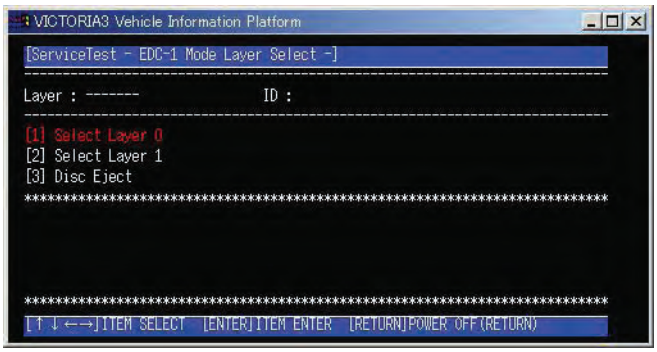
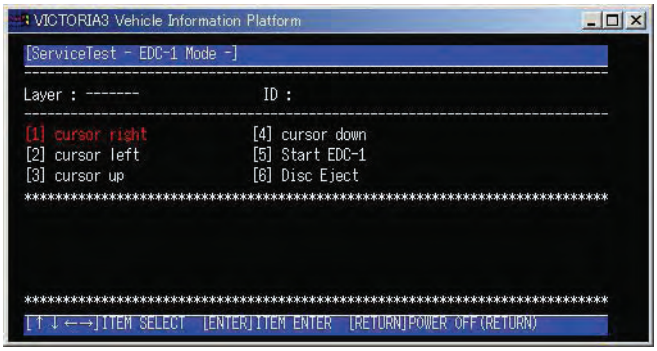
3. About EDC test





4. Flow of test mode for Mecha service

1) Precautions

This product uses 5V and 3.3V as standard voltages. The electrical potential that is the reference for signals, is not GND, but VREF (approximately 2.2V) and VHALF (approximately 1.65V).

During product adjustments, if the reference voltage is mistakenly taken as GND, and a grounding contact is made, not only would it be impossible to measure the accurate electrical potential, but also the servo motor would malfunction, resulting in the application of a strong impact on the pick up. The following precautionary measures should be strictly adhered to, in order to avoid such problems.

The reference voltage and GND should not be confused when using the minus probe of a measurement device. When an oscilloscope is being used special care should be taken to make sure that the reference voltage is not connected to the probe of ch1 (on the minus side), while the probe of ch2 (on the minus side), is connected to GND. Further, since the body frame of most measurement devices have the same electrical potential as the minus side of the probe, the body frame of the measurement device should be set to floating ground.

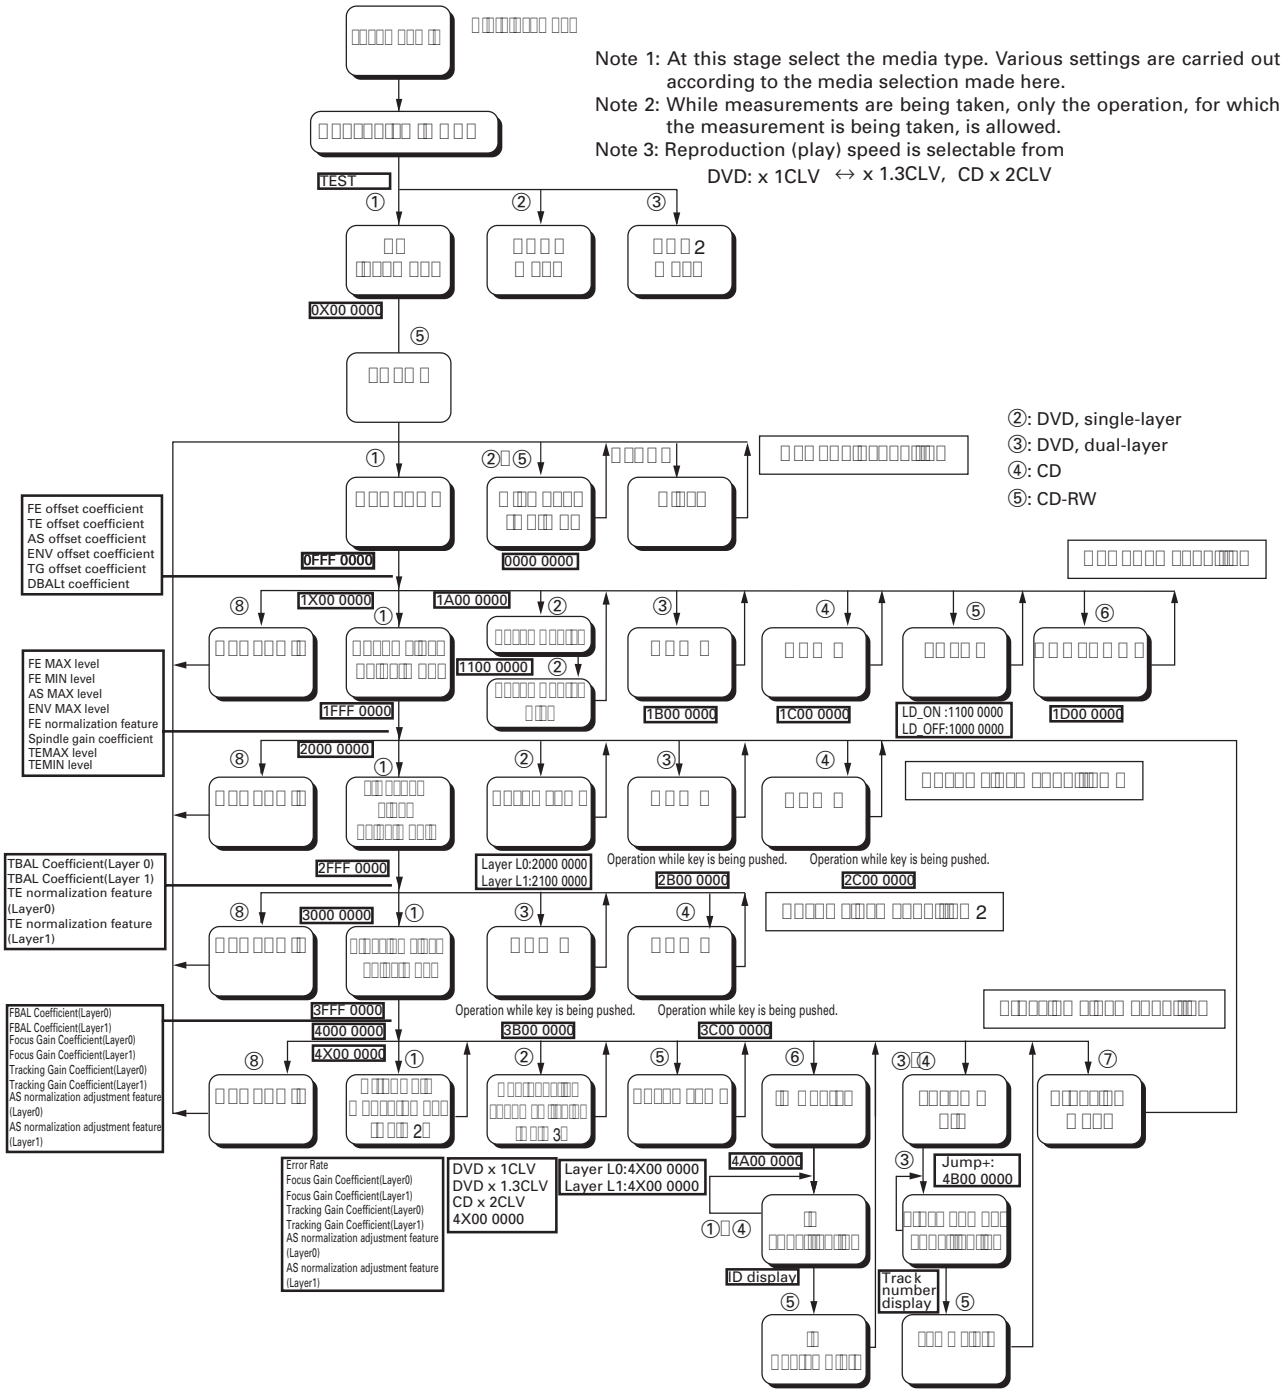
If the reference voltage is connected to GND by mistake, turn the regulator OFF immediately, or turn the power OFF.

- Remove the filters and wires used for measurements only after the regulator has been turned OFF.
- After the power supply is turned on, regulator ON the following adjustment and measurement are promptly done.
- Whenever the product is in the test mode, the software will not take any protective action. For this reason, special care should be taken to make sure that no mechanical or electrical shock could be applied to the product when taking measurements in the test mode.
- Whenever the EJECT key is pressed to eject the disk, no other keys, other than the EJECT key, should be pressed until the disk eject action has been completed.
- Press the EJECT key only after the disk has stopped completely.
- If the product hangs up turn the power OFF immediately.
- Laser didoes may be damaged, if the volume switch for the laser power adjustment of the pick up unit, is turned.

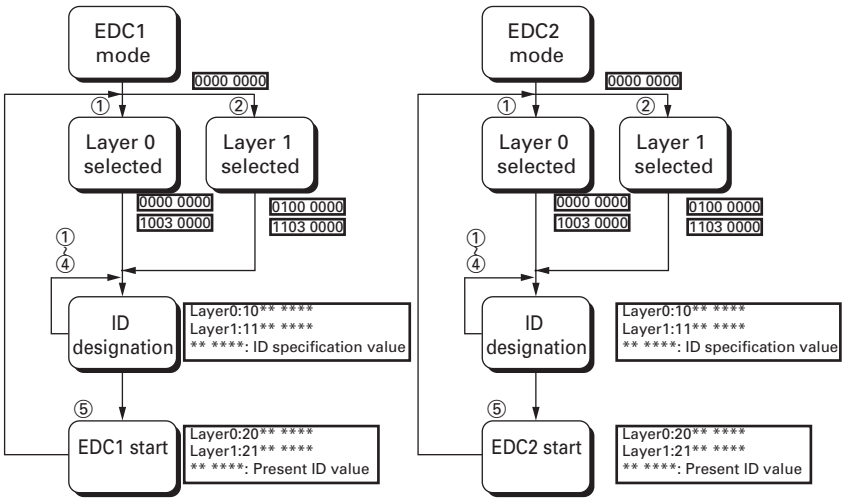
Attention)

- Test mode starting procedure
  ACC ON while pressing the BAND and ESC keys together.
- Test mode stopping procedure
  ACC and Backup OFF.

● Front-End test mode flow chart



Note 1: At this stage select the media type. Various settings are carried out according to the media selection made here.
Note 2: While measurements are being taken, only the operation, for which the measurement is being taken, is allowed.
Note 3: Reproduction (play) speed is selectable from
DVD: x 1CLV ↔ x 1.3CLV, CD x 2CLV



F-close and F-search cannot be executed, unless LD-ON is set.
[If F-close isn't executed within 9 seconds after LD-ON, it switches to LD-OFF automatically.
And even if F-search is executed within 9 seconds after LD-ON, it also switches to LD-OFF.]
Please carry out F-close after carrying out power-off at once and carrying out power-on again, when carrying out F-close after performing F-search.

The track number designation is selected from the track numbers already prepared for selection.
Switching to cyclic operation is made at step ③, and the decision is finalized (entered) in step ④.

For CD: Tracks 1, 4, 10, 11 and 32.

For DVD: Tracks 1, 4, 10, 11, 32, 64 and 100.

Method for designating an ID address:

- A number of digits are determined through commands ① and ②. Numerical UP/DOWN operations are performed through commands ③ and ④. The decision is finalized (entered) with command ⑤.

Display

Error Code List

Error status from DVD microcomputer	Contents	Display
0X50	Mecha. error	No display
0X40	No disc	No display
0X30	The temperature is abnormal	Thermal Protection in Motion
0X20	Read error	Error-02-XX
0XE2	Non-playable disc	NON-PLAYABLE DISC
0X90	Different region disc	DIFFERENT REGION DISC
0XFF	Undefined error	Error-FF

Error code of read error(Part of XX)

Error Code	Contents	Display
0X99	Data cannot read	Please confirm the disc

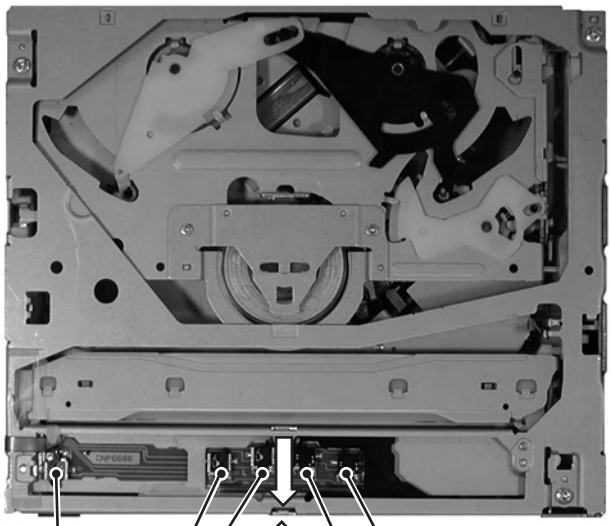
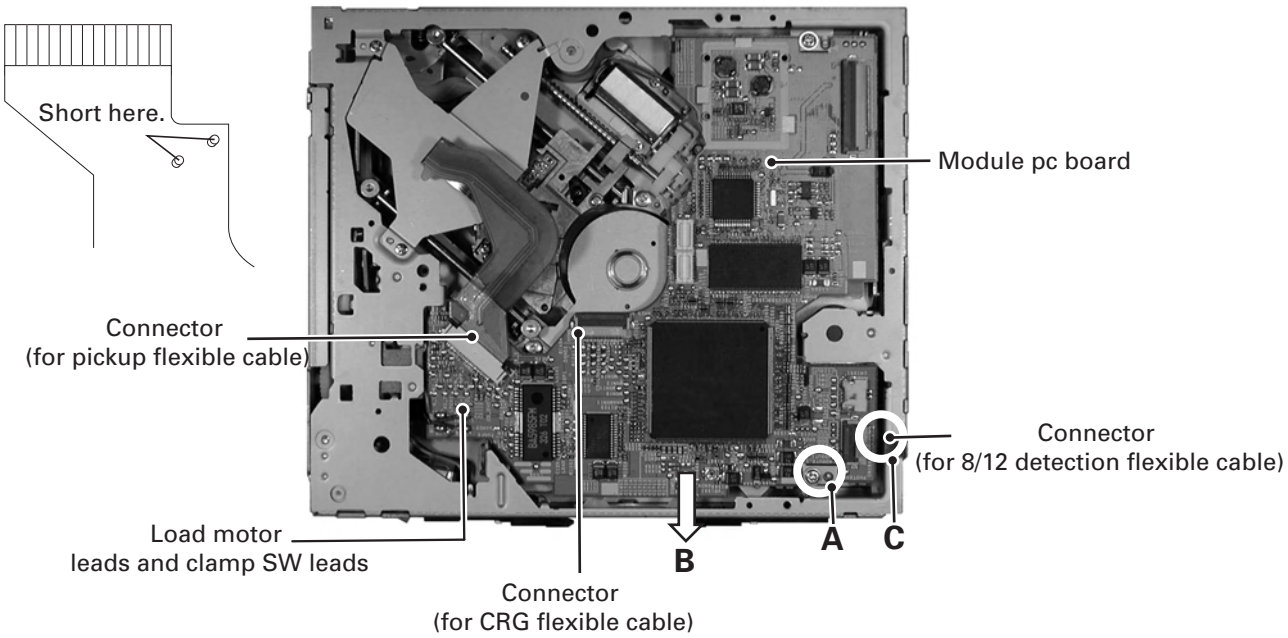
● Precautions on handling the mechanism module

1. Hold the upper and main frames.
2. Do not hold the front portion of the upper frame. It is a delicate part.
3. Do not touch the switches on the top panel.
4. Be careful not to catch the flexible cables.



● Removing the module pc board

1. Set the mechanism to the lock position (disc load standby position).
2. Place the mechanism module upside down.
3. Short the two lands on the pickup flexible cable as shown below.
4. Be sure to disconnect the pickup flexible cable and the CRG flexible cable from the connectors to protect them from damages.
5. Remove solder from the load motor leads and clamp SW leads.
6. Loosen the two fixing screws. Lift the position A of the module pc board lightly and move it in the direction B to remove it. Be careful not to damage the flexible cable C.
7. Disconnect the 8/12 detection flexible-cable from the connector.



● Removing the pickup unit

1. Remove the module pc board in accordance with the procedure of "Removing the module pc board."
2. While holding the pickup case, remove the skew screw (main).
3. Lifting the end of the pickup rack, slide the main shaft, and remove the pickup unit.

Notes:

Replacing the pickup unit requires the skew adjustment.
Remove glue from both ends of the main and sub shafts, and skew stud.
Do not reuse the old skew screw. Be sure to use a brand-new skew screw supplied with a new pickup unit.
Fix the skew screw with glue (GYL1001) after adjustment.

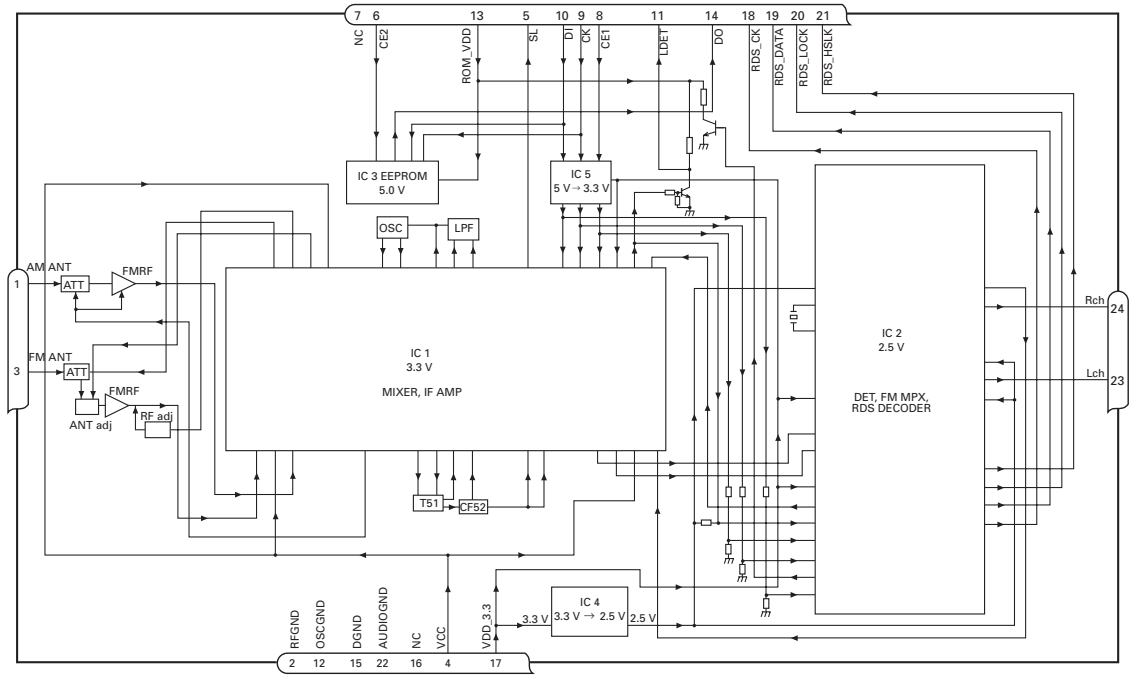
● FM/AM Tuner Unit



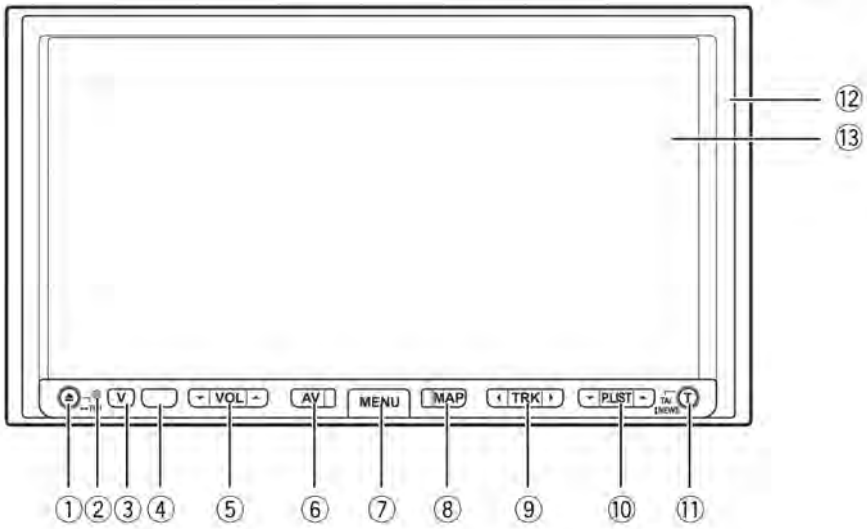
No.	Symbol	I/O	Explain	
1	AMANT	I	AM antenna input	AM antenna input high impedance AMANT pin is connected with an all antenna by way of 4.7 μH. (LAU type inductor) A series circuit including an inductor and a resistor is connected with RF ground for the countermeasure against the hum of power transmission line.
2	RFGND		RF ground	Ground of antenna block
3	FMANT	I	FM antenna input	Input of FM antenna 75 Ω Surge absorber (DSP-201M-S00B) is necessary.
4	VCC		power supply	The power supply for analog block. D.C 8.4 V± 0.3 V
5	SL	O	signal level	Output of FM/AM signals level
6	CE2	I	chip enable-2	Chip enable for EEPROM "Low" active
7	NC		non connection	Not used
8	CE1	I	chip enable-1	Chip enable for AF•RF "High" active
9	CK	I	clock	Clock
10	DI	I	data in	Data input
11	LDET	O	lock detector	"Low" active
12	OSCGND		osc ground	Ground of oscillator block
13	ROM_VDD		power supply	Power supply for EEPROM pin 13 is connected with a power supply of micro computer.
14	DO	O	data out	Data output
15	DGND		digital ground	Ground of digital block
16	NC		non connection	Not used
17	VDD_3.3		power supply	The power supply for digital block. 3.3 V ± 0.2 V
18	RDS_CK	O	RDS clock	Output of RDS clock(2.5 V)
19	RDS_DATA	O	RDS data	Output of RDS data(2.5 V)
20	RDS_LOCK	O	RDS lock	Output unit "High" active(2.5 V) (RDS_LOCK turns over by the external transistor. "Low" active)
21	RDS_HSLK	O	RDS high speed lock	Output unit "High" active(2.5 V)(RDS_HSLK turns over by the external transistor. "Low" active)
22	AUDIOGND		audio ground	Ground of audio block
23	L ch	O	L channel output	FM stereo "L-ch" signal output or AM audio output
24	R ch	O	R channel output	FM stereo "R-ch" signal output or AM audio output

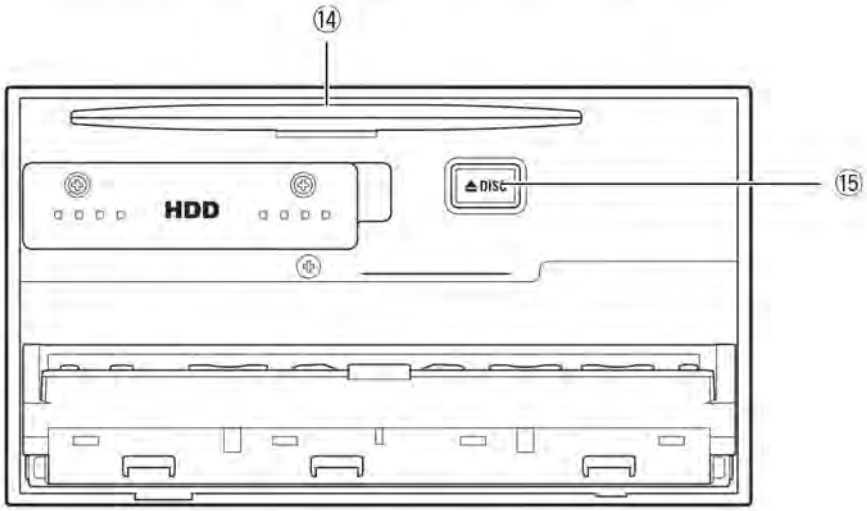
8. OPERATIONS

How to Use the Navigation System and Names of the Parts

Checking Part Names and Functions

This section gives information about the names of the parts and main features using the buttons.





① OPEN CLOSE button
Press to open or close the LCD panel and access the disc loading slot.
Press and hold to display the screen angle adjustment screen where you can adjust the angle of the LCD panel.

② RESET button
Press to recover from an errors or another. You can clear the customised settings related to the AV source.

③ **V button**
Press to enter the **PICTURE ADJUSTMENT** mode.

➲ Operating the Picture Adjustment → Operation Manual

Press and hold to turn off the back light of the LCD panel. To turn on the back light, press this button again.

④ **Signal receptor**
This area receives signals from a remote control (sold separately).

⑤ **VOL (▲/▼) button**
Pressing on the ▲ side of the button to increase the volume of the audio source while pressing on the ▼ side of it to decrease the volume of the audio source.
You can not adjust the sounds of the navigation features (e.g. guidance voice) and phone volume.

⑥ **AV button**
Press to switch the screen to the audio operation screen. If you press the **AV** button again, the source switches.

❒ Press and hold the **AV** button to turn off the source.

⑦ **MENU button**
Press to display a navigation menu of the navigation system.
Press and hold to display Phone Menu when the Bluetooth unit is connected to this navigation system.

⑧ **MAP button**
Press to view the navigation map screen. Also, when the map is scrolling, pressing this button returns you to the display of the map of your surroundings. Use to switch the view mode of the navigation when the map of your surroundings is displayed.

⑨ **TRK (◄/►) button**
Pressing this button when the built-in DVD drive source is selected skips a track or a chapter.
Press and hold to fast forward/fast reverse a track or a chapter.

❒ Various operations are possible depending on the Audio source.

⑩ **P.LIST (▲/▼) button**
Changes the discs in the magazine during the multi-CD player (sold separately) operation.
Switches preset channels during the Radio operation.

❒ Various operations are possible depending on the Audio source.

⑪ **TA /NEWS button**
Press to turn traffic announcements function on or off. Press and hold to turn NEWS function on or off.

⑫ **LCD panel**

⑬ **LCD screen**

⑭ **Disc loading slot**
Insert a disc to play.

⑮ **EJECT button**
Press to eject the disc from the disc loading slot.

About the Power Supply of the Navigation System

How to turn the power on or off

The power to this navigation system turns on or off in conjunction with the ignition switch (ACC) of the vehicle. There is no power switch.

How to turn off the screen for a while

Touch and hold the **V** button to turn off the screen for a while, and the navigation system enters the standby mode.

❒ To cancel the standby mode, press the **V** button again, or touch the screen.

Hardware buttons

(1) OPEN CLOSE button
Press to access the DVD loading slot. Press and hold to display the angle adjustment screen.

(2) V button
Press to enter the PICTURE ADJUSTMENT mode.

(3) VOL (▼/▲) button
You can adjust the volume of Audio source.

(4) AV button
Press to switch the screen to the audio operation screen. If you press the AV button again, the audio source switches.

(5) MENU button
Press to display a navigation menu.

(6) MAP button
Press to view the navigation map screen or press to switch view mode.

(7) TRK (◄/►) button
Pressing this button when the built-in DVD drive source is selected skips a track or a chapter. Press and hold to fast forward/fast reverse a track or a chapter.

(8) P.LIST (▼/▲) button
Switches preset channels during the Radio operation.

(9) T button*
Preset button for XM Instant Traffic and SIRIUS traffic channel. Hold down to assign preset and you can recall that later.

*: XM satellite radio tuner (GEX-P10XMT or GEX-P920XM) or SIRIUS satellite radio tunner (SIR-PNR2) is required, together with an active subscription separately.

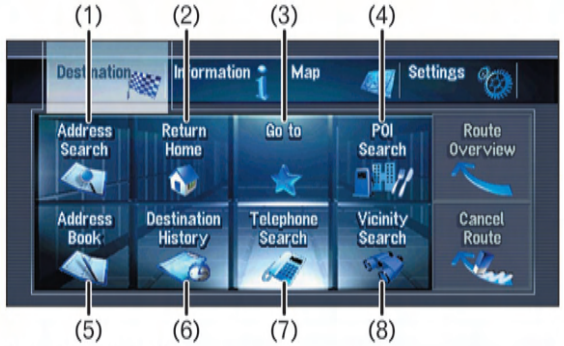
Switching the screen

AV screen **Navigation map**

Search function overview

This navigation system has multiple methods for entering your destination.

Press the MENU button to display the navigation menu.



(1) Search by address
(2) Shortcut key for home address
(3) Shortcut key for favorite destination
(4) Search for POIs in the database
(5) Select a destination from your registered point
(6) Select a previously routed destination
(7) Search destination by business telephone number
(8) Search for POIs in your vicinity

Search result list for vicinity search

POI·····Restaurants, Hotels, Gas Stations, and other stores and businesses

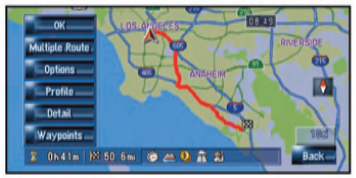
Searching your destination by address

1 **Press the MENU button and then touch "Address Search".**

2 **Select state or province by [CA] and then input the house number and touch "OK".**

3 **Input the street name.**

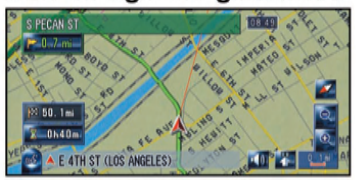
4 **Select the street name from list.**
After some steps for narrowing down your destination, the route calculation carried out and the route confirmation screen appears.



If you want to get another recommended route, by **"Multiple route"** and choose the best one.

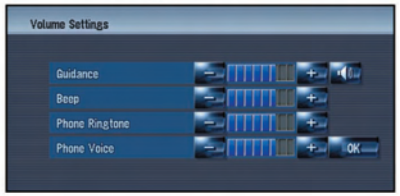
5 **Touch "OK" to decide your route, and then the navigation starts.**

6 **Begin driving in accordance with navigation guidance.**



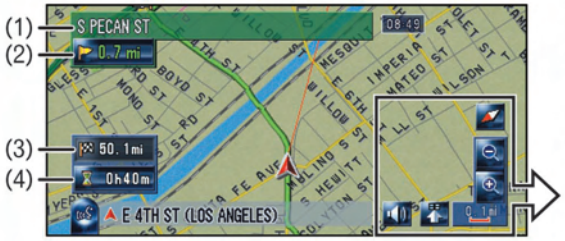
This navigation systems gives you route guidance both visually and by voice.

Setting the voice guidance volume



Press or touch in the following order.
MENU button → **Settings** tab → **Volume**

Basic operation on the map screen



Mute the navigation voice
Touch .

Short-cut Menu
Touch .

Zoom in or zoom out
Touch or .

Scrolling the map
Touch where you would like to scroll to on the map screen.

(1) Next street
(2) Distance to the next guidance point
(3) Distance to your destination
(4) Estimated time of arrival (in default)

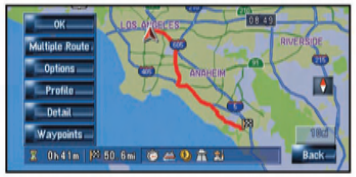
Searching your destination by address

1 **Press the MENU button and then touch "Address Search".**

2 **Select state or province by and then input the house number and touch "OK".**

3 **Input the street name.**

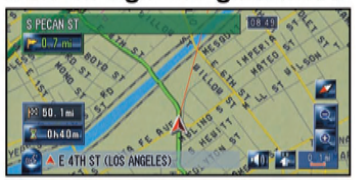
4 **Select the street name from list.**
After some steps for narrowing down your destination, the route calculation carried out and the route confirmation screen appears.



If you want to get another recommended route, by **"Multiple route"** and choose the best one.

5 **Touch "OK" to decide your route, and then the navigation starts.**

6 **Begin driving in accordance with navigation guidance.**

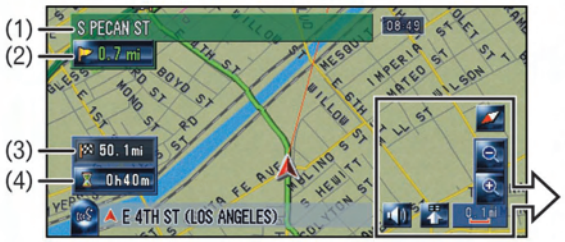


This navigation systems gives you route guidance both visually and by voice.

Setting the voice guidance volume

Press or touch in the following order.
MENU button ➔ **Settings** tab ➔ **Volume**

Basic operation on the map screen



Mute the navigation voice
Touch .

Short-cut Menu
Touch .

Zoom in or zoom out
Touch or .

Scrolling the map
Touch where you would like to scroll to on the map screen.

(1) Next street
(2) Distance to the next guidance point
(3) Distance to your destination
(4) Estimated time of arrival (in default)

Traffic information on the map

Traffic conditions can be overlaid on the map.
GEX-P10XMT XM Digital Satellite Data & Audio Receiver (sold separately) is required, together with an active subscription for the XM NavTraffic service.

(1) Traffic event

- Stopped traffic
- Stop and go traffic
- Closed/blocked roads
- Other event (e.g., accident)

(2) Traffic flow

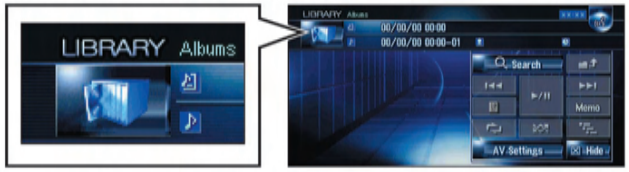
The following items represent the traffic flow for the road.

- 5 — 15: 5-15 mph (8-24 km/h)
- 20 — 40: 20-40 mph (32-64 km/h)
- 45 —: 45 mph or faster (72 km/h or faster)

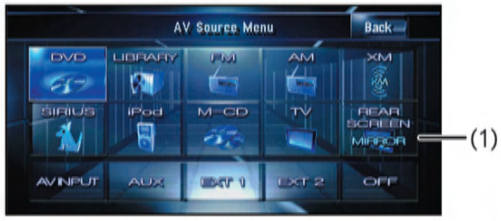
The icon ● indicates that the average speed of the road is over 45 mph (72 km/h).

Changing the AV source

1 Touch the source icon.



2 Touch the desired AV source.

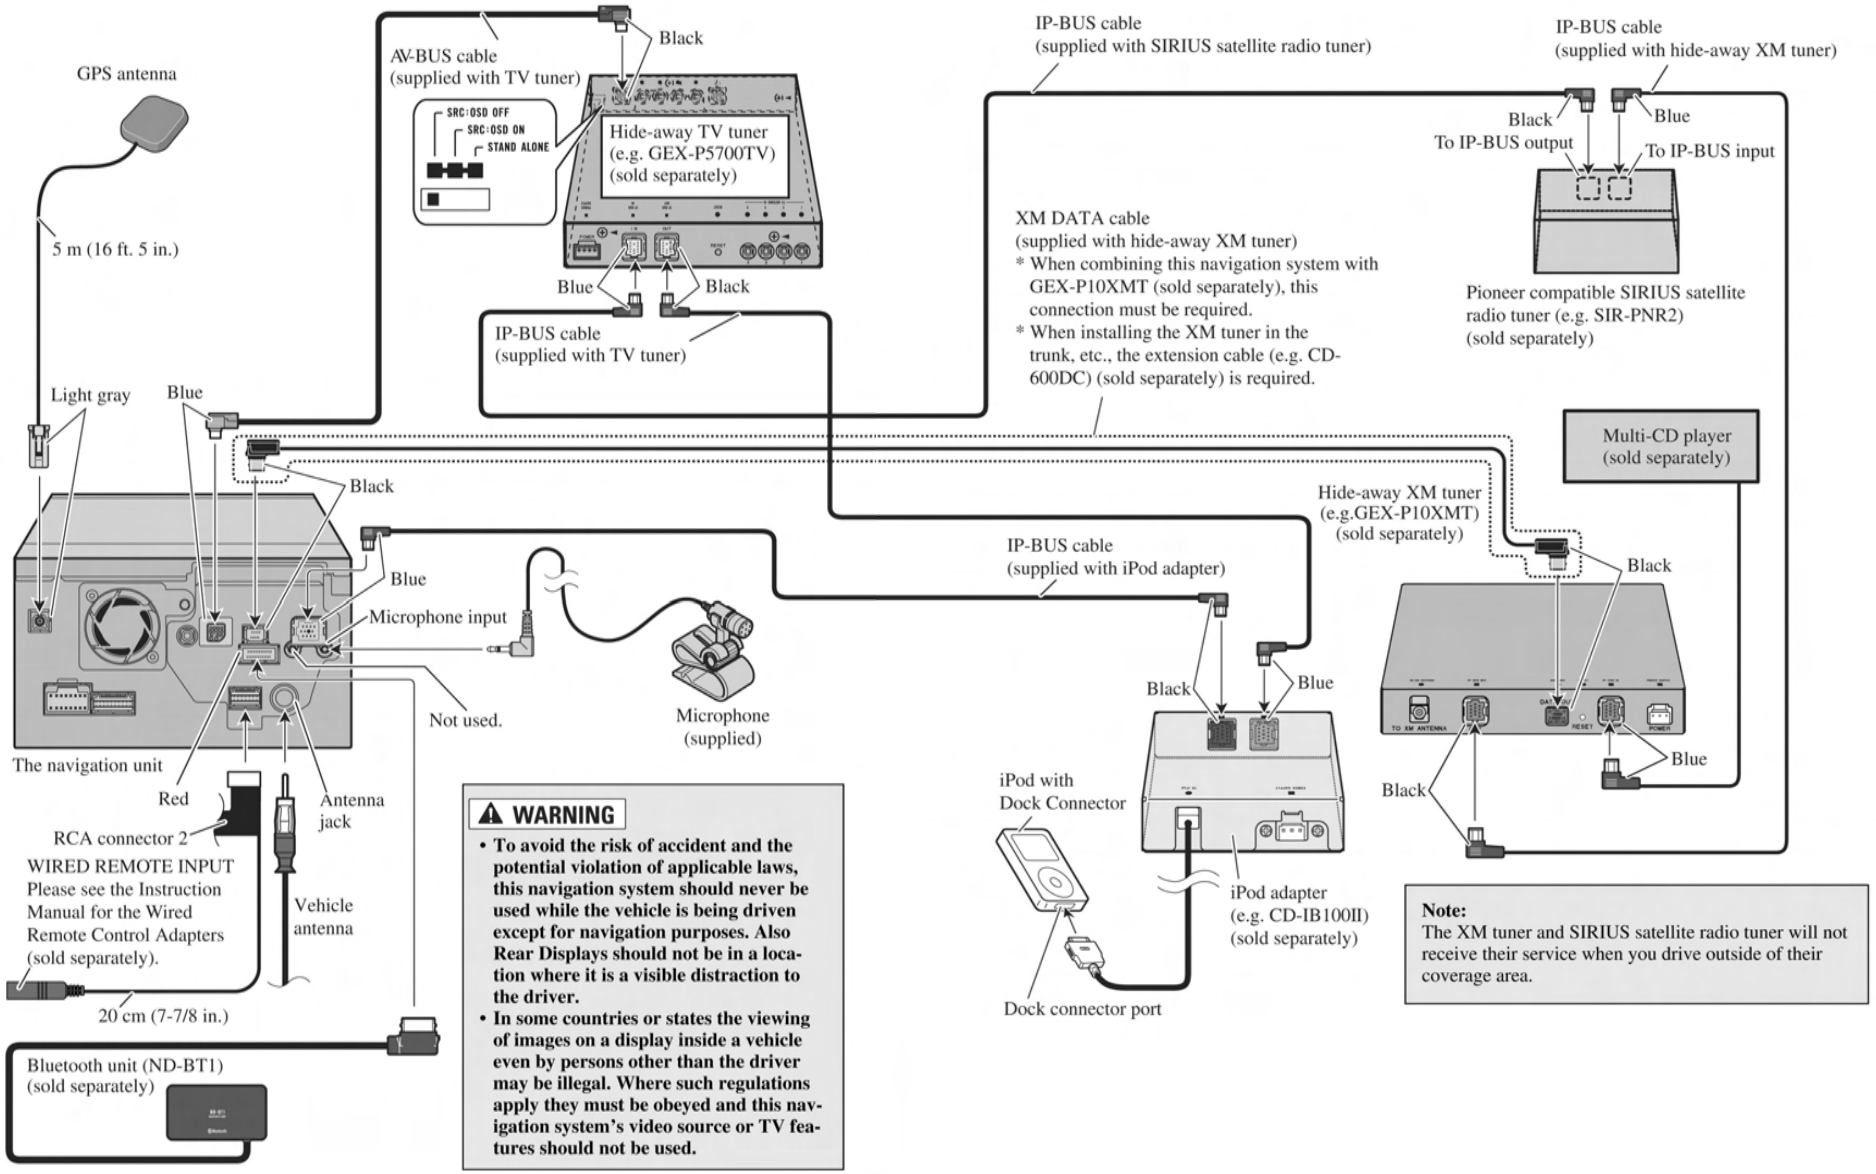


(1) You can switch the AV source for rear display in the following order.
"MIRROR" (Same as front) – **"DVD"** (DVD drive) – **"AV"** (AV input)

Operation of Music Library

First, you need to play a CD for recording into the built-in hard disk drive. (The recording is carried out by 4 times speed in parallel with playing that CD.) After the recording, you can find and select the song easily from a playlist.

(1) Search a song by album name, artist name, genre, customized playlist.
(2) Touch and hold to memorize that song as "My Mix" playlist.
(3) Information of current song
(4) "Group" playing now.



⚠ WARNING

- **To avoid the risk of accident and the potential violation of applicable laws, this navigation system should never be used while the vehicle is being driven except for navigation purposes. Also Rear Displays should not be in a location where it is a visible distraction to the driver.**
- **In some countries or states the viewing of images on a display inside a vehicle even by persons other than the driver may be illegal. Where such regulations apply they must be obeyed and this navigation system's video source or TV features should not be used.**

Note:
The XM tuner and SIRIUS satellite radio tuner will not receive their service when you drive outside of their coverage area.

SAFETY INFORMATION

CAUTION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer.
Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.
Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty.
If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.
Health & Safety Code Section 25249.6 - Proposition 65

● Service Precaution

1.You should conform to the regulations governing the product (safety, radio and noise, and other regulations), and should keep the safety during servicing by following the safety instructions described in this manual.

2. Be careful in handling ICs. Some ICs such as MOS type are so fragile that they can be damaged by electrostatic induction.

[Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol.
Please be sure to confirm and follow these procedures.

1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification(addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris.
Soldering should be finished with the proper quantity. (Refer to the example)

④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs.
In addition, be sure that there are no pinched wires, etc.

⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages.
If you find a damaged power cord, please exchange it with a suitable one.

⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries.
Please pay attention to your surroundings and repair safely.

2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification.
Adjustments should be performed in accordance with the procedures/instructions described in this manual.

3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance.
Make sure the proper amount is applied.

4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

2. EXPLODED VIEWS AND PARTS LIST

*NOTES : • Parts marked by " * " are generally unavailable because they are not in our Master Spare Parts List.*
• The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
• Screw adjacent to▽mark on the product are used for disassembly.
• For the applying amount of lubricants or glue, follow the instructions in this manual. (In the case of no amount instructions,apply as you think it appropriate.)

6. ADJUSTMENT
6.1 BLUETOOTH TEST MODE

● Bluetooth Test Mode (when using BT Built-in mobile phone)

0. Specifications for BT Built-in mobile phone

A mobile phone supporting Bluetooth Ver.1.1 and mounting HFP and OPP is required.
Models with which connection has been verified are recommended.
*HFP : **H**ands-**F**ree **P**rofile, OPP : **O**bject **P**ush **P**rofile

Recommneded mobile phone model;

for AVIC-HD1BT/EW5 (ND-BT1/E5)
- SonyEricsson S700i/K750i

for AVIC-Z1/UC + ND-BT1/E5
- AUDIOVOX SMT5600

Notes: SMT5600 is not possible to transfer whole address book at a time.
It can be transfered one by one on this model.

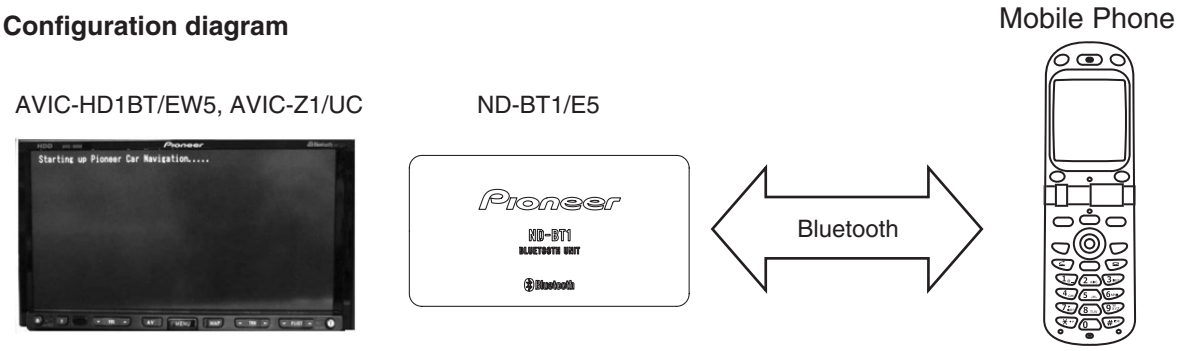
1. Caution

*This is a precaution for the case where the mobile phone is actually connected at the serviced site.
For AVIC-HD1BT/EW5 and AVIC-Z1/UC, up to 5 sets of Bluetooth units can be registered.
When more than 5 sets are tried to be registered, the 6th set and beyond will be overwritten. (Overwriting will be made by selecting the model number to be overwritten.)
In the case of overwriting, be careful as the device information stored by the user will be deleted.

2. Outline of functions

When checking the operation using the BT built-in mobile phone, check the connection under the normal operation.
- Checking of Bluetooth connection (authentication connection and voice connection)
- Checking of Bluetooth antenna sensitivity (connection)

3. Configuration diagram



4. Procedure for checking

Display	Operation Method
	ND-BT1/E5 will be connected to the connectable product, and start.
	Select [Menu]→[Settings]→[Hardware]→[Conection Status]. Make sure on the left screen that the items under Phone Connection Status are indicating [OK]. In this case, because registration of the BT telephone has not been completed, level indication of the antenna bar is not displayed even though the status is indicated as OK. * In the case of NOK, possible case is poor connection between ND-BT1/E5 and navigation product or failure of the wired section of ND-BT1/E5.
↓	
	Select [Menu]→[Info/Phone]→[Phone Menu]→[Phone Settings]→[Registration]→[Mobile]. Search for the Bluetooth device and enter the passkey by operating the mobile telephone. * In case the device name is not displayed in Bluetooth device search, the possible cause is the failure of the wireless section of ND-BT1/E5.
↓	
	When the connection with the BT telephone is completed, the screen as shown on the left will be displayed. Antenna bar will be displayed on the [Conection Status] screen. When the connection is successfully established, conduct speech test and check the voice transmission and reception.

● Bluetooth Test Mode (using spectrum analyzer)

1. Cautions

If there is a spectrum analyzer supporting 2.4 GHz at the service site, confirmation of transmission carrier becomes possible.
Since ND-BT1/E5 cannot operate singly, the AVIC-HD1/EW5 or AVIC-Z1/UC is required.

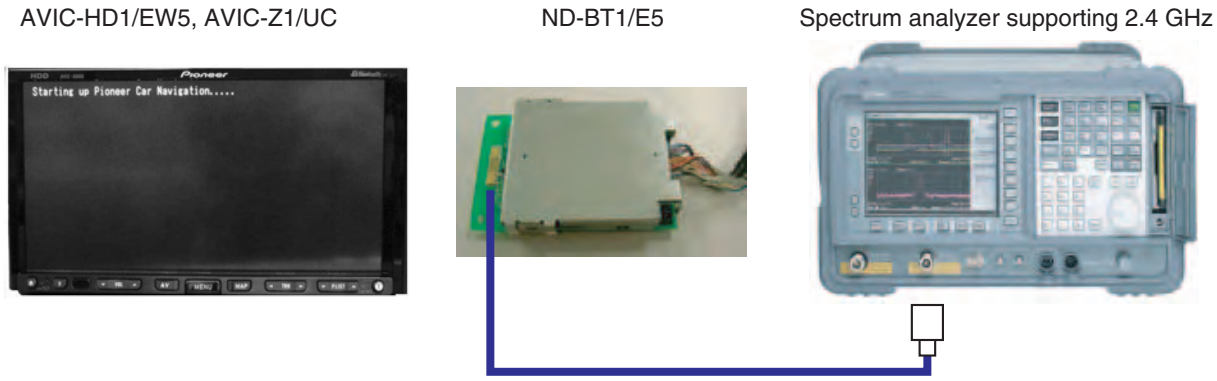
Carrier existence is checked by removing the product case and applying the probe onto the "ANT" land of the base unit.
Since it is done by probe connection, the level cannot be confirmed accurately.

2. Function outline

Simple operation check on Bluetooth is executed in test mode using a spectrum analyzer supporting 2.4 GHz.

Output check on Bluetooth unit

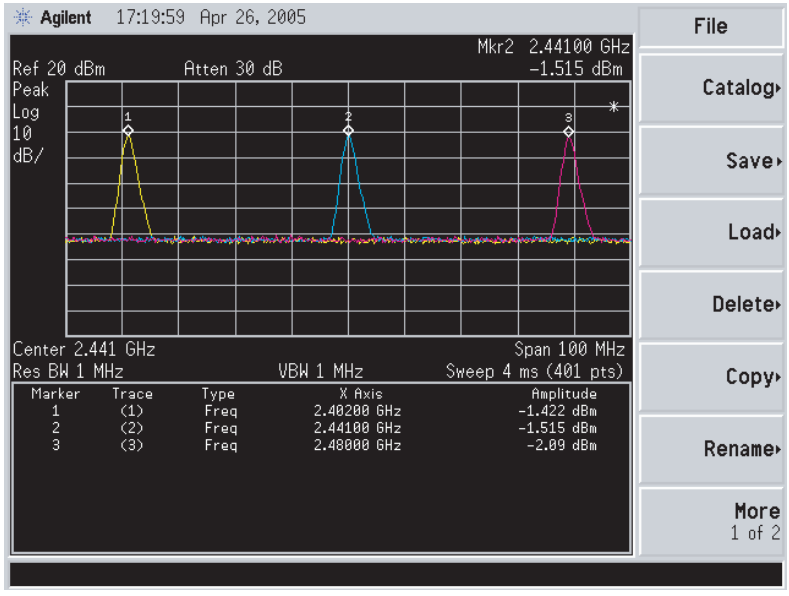
3. Configuration diagram



4. Procedure for test mode startup

Display	Operation Method
Bluetooth Unit Test 1) Loop Back(TX) Test 2) Page Scan Test 3) Inquiry Scan Test 4) Local TX Test 5) Local TX(No Modulate) Test [OK]Select [Ret]Return [Up Down]Chenge Item ↓	Enter the test mode using a product connectable to ND-BT1/E5. When the test screen is displayed, select [Bluetooth Unit Test] from the menu. 1) Loop Back(TX) Test (Not used for servicing.) 2) Page Scan Test (Not used for servicing.) 3) Inquily Scan Test (Not used for servicing.) 4) Local TX Test (Not used for servicing.) 5) Local TX(No Modulated) Test (Not used for servicing.) 5) Select Local TX(No Modulated) Test.

Display	Operation Method
	Bring the cursor to [TX Frequency], and push [OK] button.
	As the selectable frequencies will be displayed on the right side of the screen, bring the cursor by using up/down cursor and push [OK] button. 00 : 2 402 MHz (default value) 27 : 2 441 MHz 4E : 2 480 MHz
	Press [Ret] key to return to the top screen of Local TX (No Modulated) Test. * On the top screen, " [OK] Exec " is displayed on the lower left position of the screen. Push [OK] button on the top screen, and take measurement using a spectrum analyzer. Apply a probe to [ANT] land on the PCB, and check if any carrier is displayed at the designated frequency band. Furthermore, make sure that carrier is displayed at each of the three bands.
	



7. GENERAL INFORMATION

7.1 DIAGNOSIS

7.1.1 DISASSEMBLY

● **Removing the Case (Fig.1)**

8. OPERATIONS

About this unit

This unit is used to connect a Bluetooth enabled cellular phone to a Pioneer HDD Navigation System.

About Bluetooth

Bluetooth is a short-range wireless radio connectivity technology that is developed as a cable replacement for cellular phones, handheld PCs and other devices. Bluetooth operates in 2.4 GHz frequency range and transmits voice and data at speeds up to 1 megabit per second. Bluetooth was launched by a special interest group (SIG) that comprises of Ericsson Inc., Intel Corp., Nokia Corp., Toshiba and IBM in 1998, and it is currently developed by nearly 2 000 companies worldwide.

- The Bluetooth word mark and logos are owned by the Bluetooth SIG, Inc. and any use of such marks by Pioneer Corporation is under license. Other trademarks and trade names are those of their respective owners.

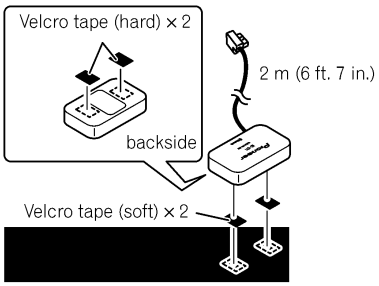
Operating environment

This unit should be used within the temperature ranges shown below.

Operating temperature range	: -10 to +60 °C (14 to 140 °F)
EN300328 ETC test temperature	: -20 and +55 °C (-4 and 131 °F)

- The line-of-sight distance between this unit and your cellular phone must be 10 meters or less in sending and receiving voice and data via Bluetooth technology. However, the transmission distance may become shorter than the estimated distance, depending on the environment in use.
- There are some Bluetooth enabled cellular phones that can be incompatible with this unit due to their Bluetooth version.
- The performance test of this unit with all Bluetooth enabled cellular phones is not conducted. Also, it is not guaranteed that this unit can be connected to all Bluetooth enabled cellular phones.
- About the Bluetooth profile and its overview
  It is required that the Bluetooth enabled cellular phone to be connected to this unit is implemented with the same profile.
  HFP (Hands Free Profile): the profile used for hands-free calling
  OPP (Object Push Profile): the profile used for transferring data such as address books

Installation notes



- This unit may be installed in relatively unnoticeable positions such as the passenger seat floor, however, before fixing the unit, check the reception condition of the Bluetooth unit with the setup-status monitor of navigation system.
- Referring to Operation Manual included in navigation system, check the connection and fine-tune the reception of this unit.
- Thoroughly wipe off the surface before affixing the velcro tape.
- Do not install the unit where it may (i) obstruct the driver's vision, (ii) impair the performance of any of the vehicle's operating systems or safety features, including air bags, hazard lamp buttons or (iii) impair the driver's ability to safely operate the vehicle.
- When disconnecting a connector, pull the connector itself. Do not pull the lead, as you may pull it out of the connector.
- Do not install the unit in places where it may become subject to high temperatures or humidity, such as:
  * Places close to a heater outlet.
  * Places exposed to direct sunlight, such as on top of the dashboard or the rear shelf.
- Places that may be splashed by rain, for example close to the door.
- Use supplied velcro tapes to secure the unit so that it doesn't move. It is extremely dangerous if cords are exposed on the floor as they may become entangled with the brake pedal etc. Hide cords so that they do not get in the way when you are driving.
- Do not disassemble or modify this unit. To do so may cause a fault.

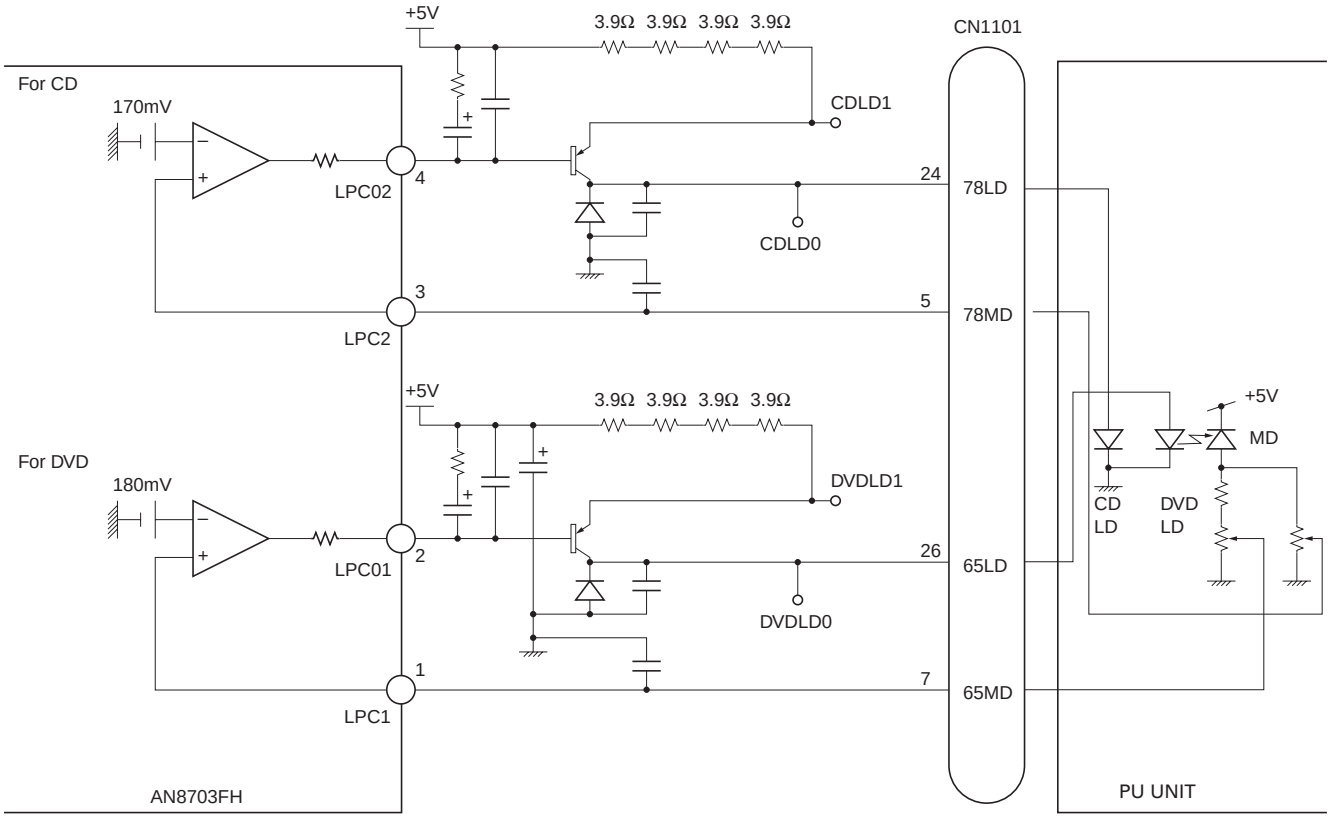
1.Circuit descriptions

1.1 Front-end processor (FEP) section (AN8703FH: IC1101)

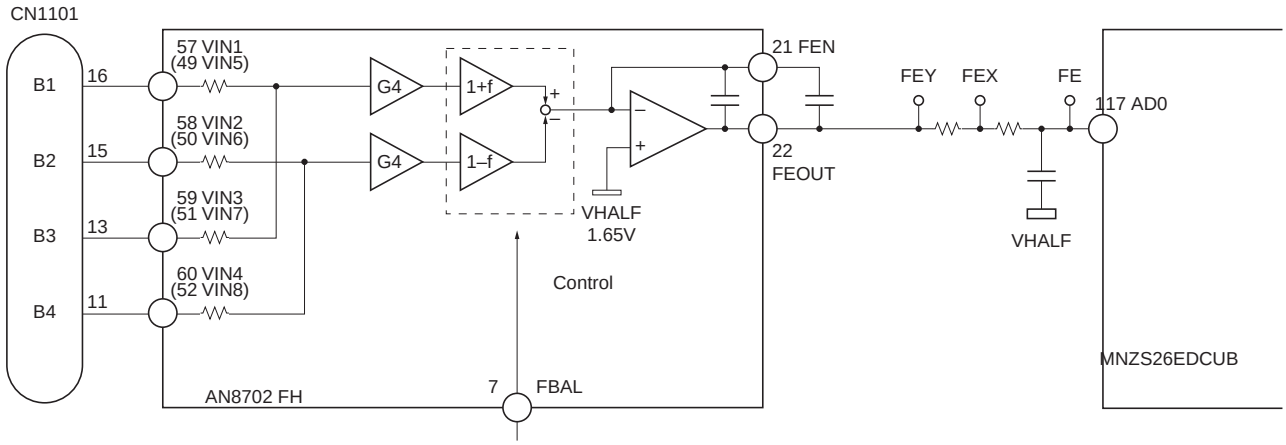
The IC1101 generates servo signals for focus and tracking operations, processes the RF signal, and controls the laser power of the pickup.
For servo signal processing, the IC contains a focus operational amplifier, a focus balance adjustment circuit, a three-beam tracking operational amplifier, a phase-difference tracking detection circuit, a tracking balance adjustment circuit, and an envelope detection circuit.
For the RF signal processing, the AGC and equalizer functions are contained in the IC.



1.1.1 APC circuit

The light output of laser diodes (LD) has largely negative thermal characteristics. If they are driven with a constant current, the laser power level will not be constant. The APC circuit is designed to control the current so that the laser power becomes constant through the monitor diode (MD). The IC AN8703FH contains two APC circuits, one for DVDs and the other for CDs. The LD current values for DVDs can be calculated by dividing the voltage between the DVDLD1 (or CDLD1 for CDs) and 5V line by 15.6 ohms (3.9 ohms x 4): approximately 26mA and 44mA for DVDs and CDs respectively.

1.1.2 Focus error (FE) generating circuit



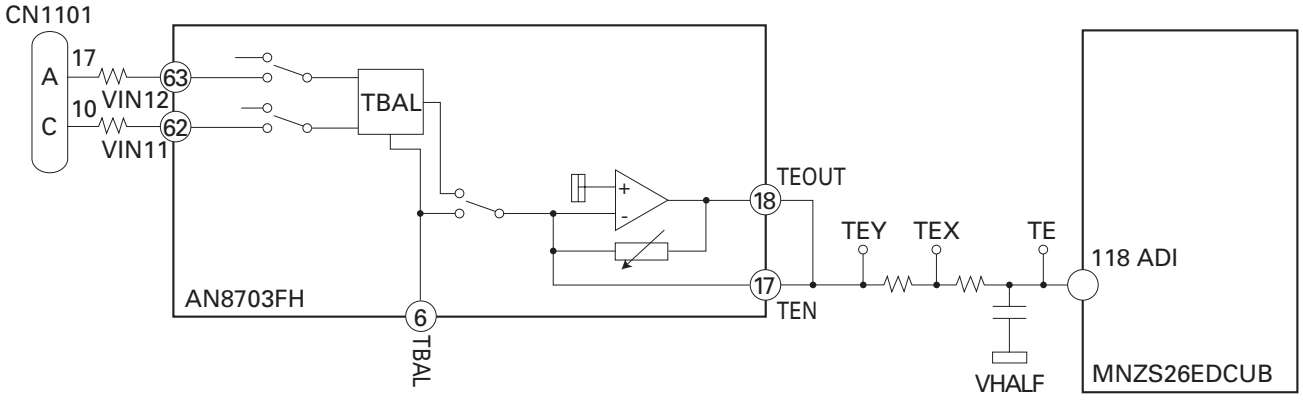
The pin numbers and names in the brackets are for CDs. The circuits for CDs and DVDs are identical, except for the input terminals of the signals B1 through B4.

Focus error (FE) generating circuit

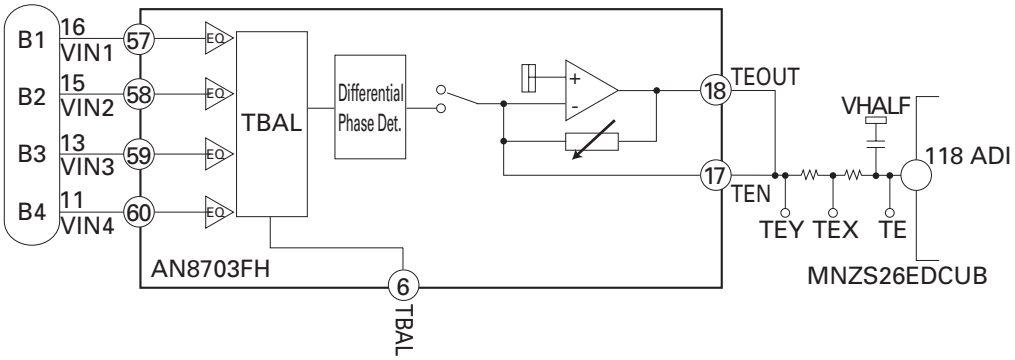
The signals B1 through B4, obtained by dividing the output in the pickup, are applied to the FE generating circuit. Inside the circuit, the (B1 + B3) and (B2 + B4) signals are generated via the internal resistors, fed into the variable amplifier for the focus balance adjustment, and finally the FE signal is generated by amplifying the {(B1 + B3) – (B2 + B4)} signal.

1.1.3 Tracking error (TE) generating circuit

• CD (three-beam TE)



· DVD (phase difference TE)



Tracking error (TE) generating circuit

For DVDs, the TE signal is generated by utilizing the phase difference between the (B2 + B4) and (B1 + B3) signals (the phase difference method).

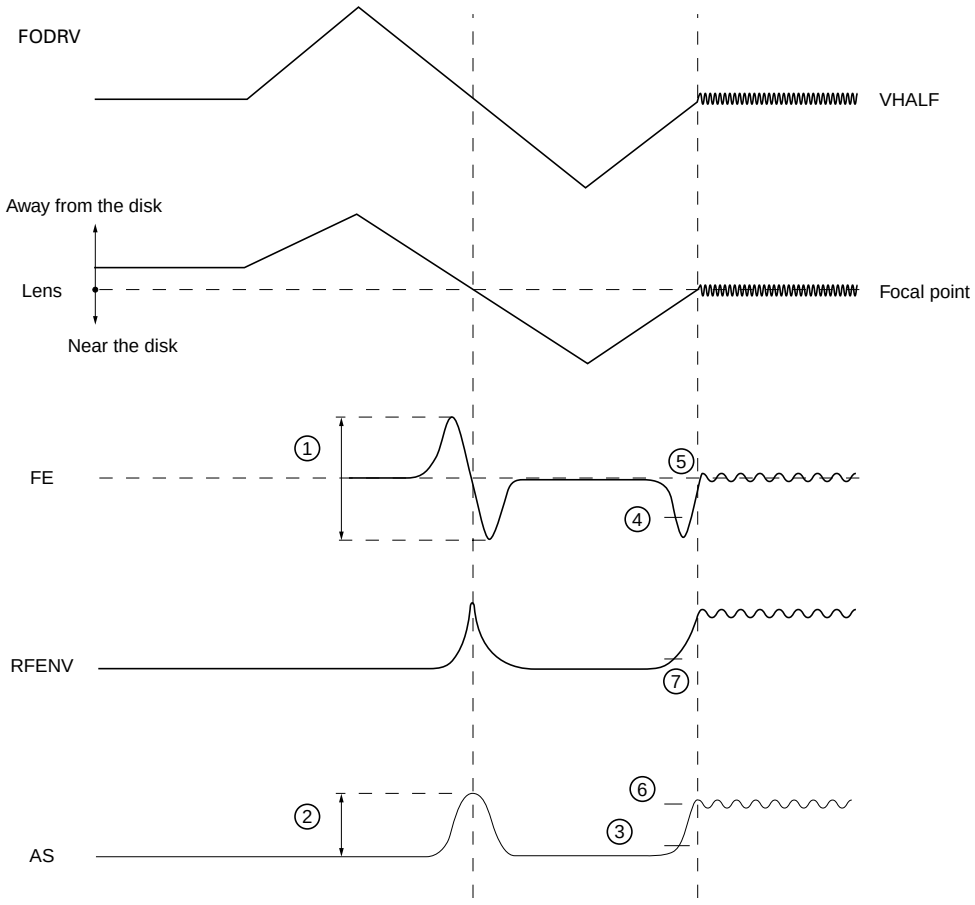
For CDs, the A and C signals are applied to the TE generating circuit via the external resistors. Inside the circuit the signals are fed to the variable amplifier for the tracking balance adjustment, and finally the TE signal is obtained by amplifying the (A – C) signal (the three-beam method).

1.2 Optical disc controller (SODC) section (MNZS26EDCUB: IC1301)

The IC1301, an optical disc controller (SODC) for DVD-ROM/DVD players, is one of a signal processing LSI conforming to the DVD standards.

This IC works as a servo controller for the focus, tracking and traverse operations, a spindle motor controller, a seek controller, a digital signal processor for DVD-ROM/RAM reproduction (8/6 demodulation and error correction), and a digital signal processor for CD-ROMs (error correction). In the DSC (Disc Servo Controller) employing an arithmetic processor as a core, analog circuits such as A/D and D/A converters and PLL, and digital circuits including a PWM converter and a cycle timer are contained. In the CIRC, a digital signal processor for CD-DA and CD-ROMs (EFM demodulation and error correction), a spindle motor digital servo processor, and a 1-bit D/A converter with a digital filter (with a secondary low-pass filter, differential OP amplifier output) are prepared. This LSI has easily realized a complete CD/DVD-ROM system.

1.2.1 Focus close



After a focus close command is issued, the following procedures are performed irrespective of DVDs and CDs:

1. Measuring and optimizing the signal levels

The pickup lens initially moves away from the disc, and then toward the disc. When the pickup lens passes the focal point, the FE, AS and RFENV signal levels are measured to optimize the FE and AS signal levels (1 and 2 shown in the above diagram).

2. Focus closing

Next, the pickup lens moves away from the disc to detect the focus closing levels for FE and AS signals. The focus loop filter operates to close the focus loop (3 through 6 in the above diagram).

3. Verifying focus close completion

The focus close completion is verified by observing the AS and RFENV signal levels (6 and 7 in the above diagram).

In the test mode, focus search is used to verify the FE, AS and RFENV signal levels and the focus drive voltage.

1.2.2 Tracking close

After a tracking-close command is issued, the following procedures are performed irrespective of DVDs and CDs:

1. Tracking brake

A half cycle of the track-cross (TKC) signal is measured. If the measured cycle falls within the prescribed range, then a brake pulse signal is output. The direction of the brake pulse depends on the relation in phase between the OFTR signal and TKC signal (which is obtained by converting the TE signal into a binary signal). When it is confirmed that the stability in lens operation against the disc has been obtained, the brake pulse output will be terminated, and the operation will proceed to the track-closing mode. If it is not confirmed, the brake pulse output will be terminated 10msec. after the brake pulse signal is output, then the operation will automatically proceed to the track-closing mode.

2. Tracking closing

The tracking drive-hold process is performed with the OFTR signal.

3. Verifying tracking close completion

The success or failure in tracking close depends on the number of tracks that the pickup crosses within the prescribed period. That is, when the number is the prescribed one or less, the system senses that the tracking close is completed. The time limit for the tracking close verification process is 20msec. The retry operation will be carried out with the command from the microcomputer if the verification has not been completed within the time limit.

1.2.3 Track jump

This system performs track jumps by selecting the following three modes depending on the number of tracks to be skipped: Interval jump, multi jump and traverse jump.

1. Interval jump

In this mode, a single-track jump is performed repeatedly. This mode is used for fine seek operation when the pickup has approached the target track or adjacent tracks are targeted.

2. Multi jump

This mode performs the pickup track-count movement by counting both edges of the TKC signal to jump the target number of tracks.

3. Traverse seek

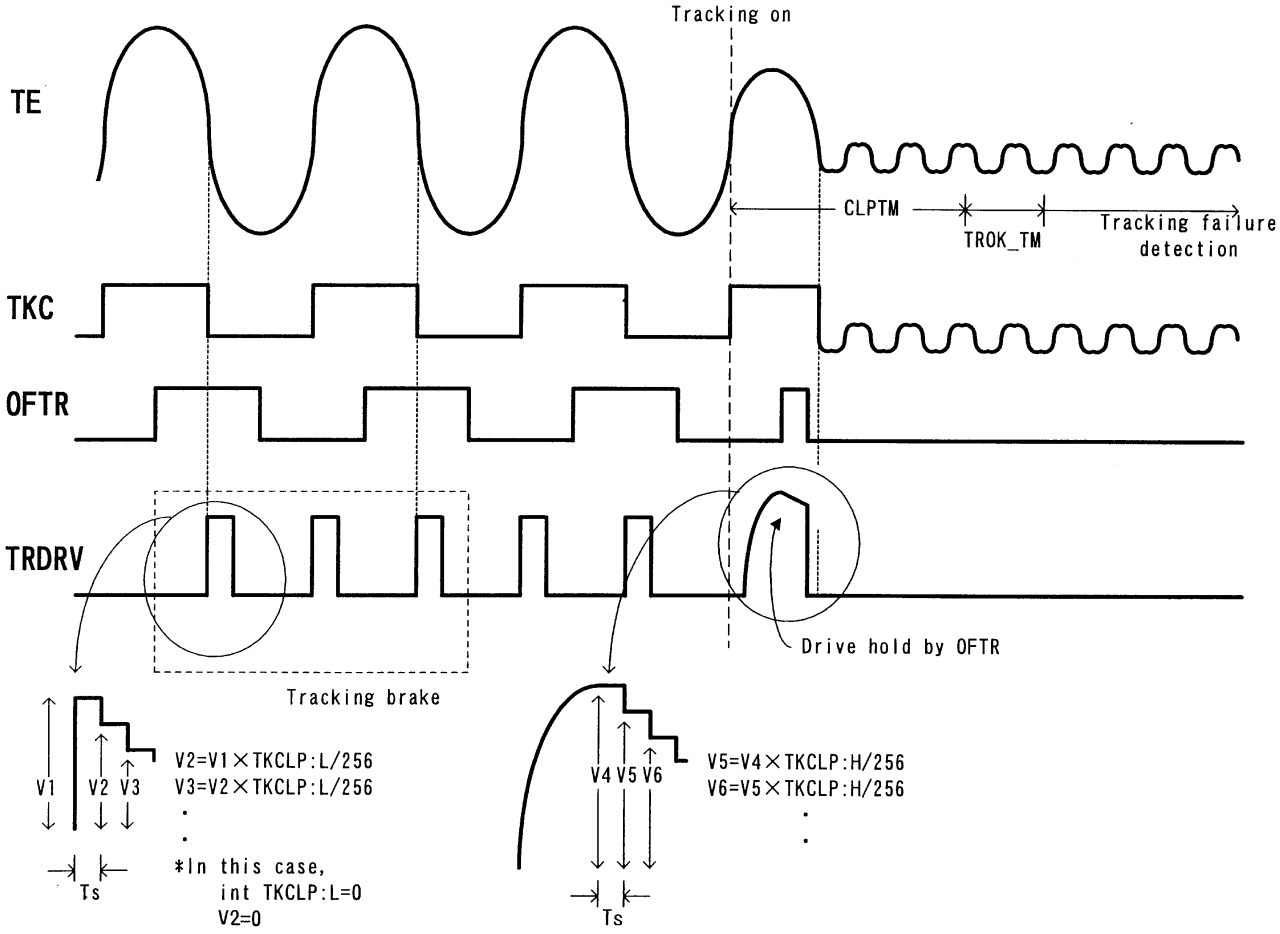
In this mode, the time is measured with the TKC signal to control the pickup speed. During the movement of the pickup, its vibration is minimized.

The track-jump mode settings for DVDs and CDs are shown below:

Target number of tracks	Track jump mode
1~10	Interval jump
11~100	Multi jump
101~500	Combination of multi jump and interval jump
501~	Traverse seek

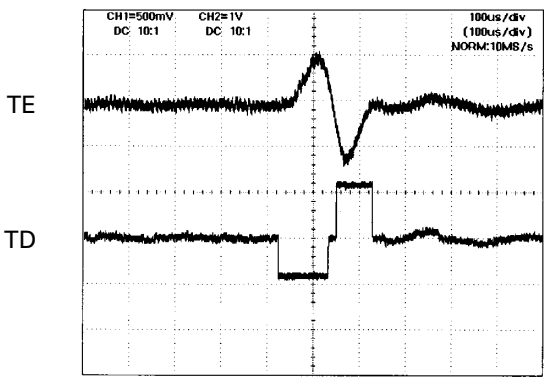
The waveform in each of the track-jump modes is shown in the following pages.

Tracking–on process

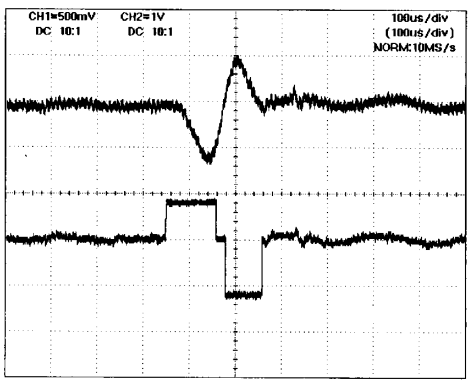


Interval jump (one track)

Toward outer tracks

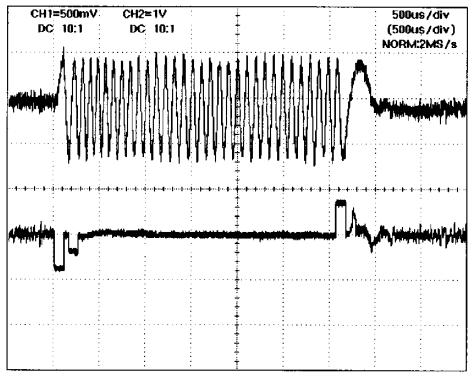


Toward inner tracks

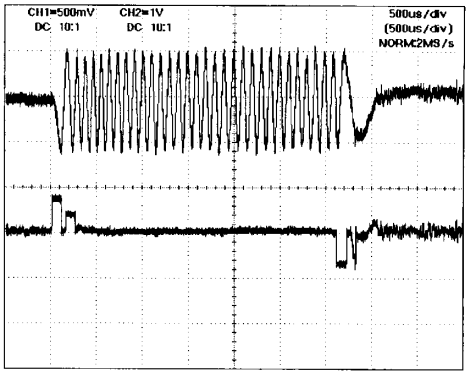


Multi jump (32 tracks)

Toward outer tracks

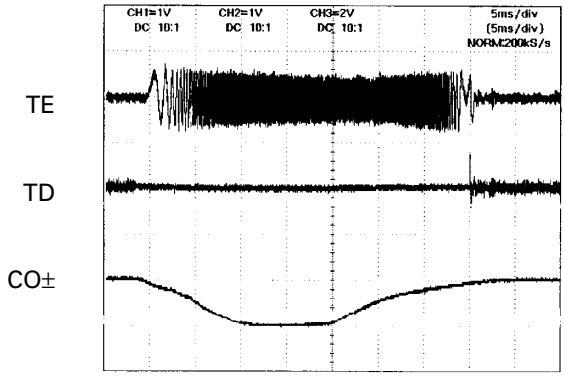


Toward inner tracks

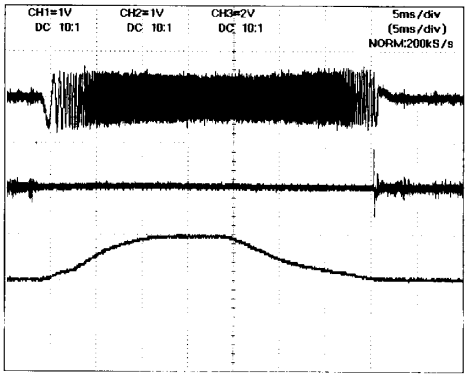


Traverse seek (501 tracks)

Toward outer tracks

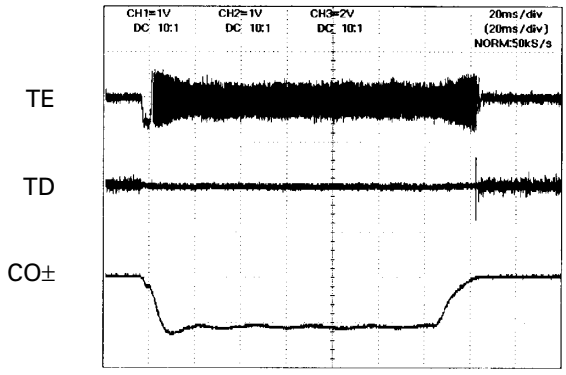


Toward inner tracks

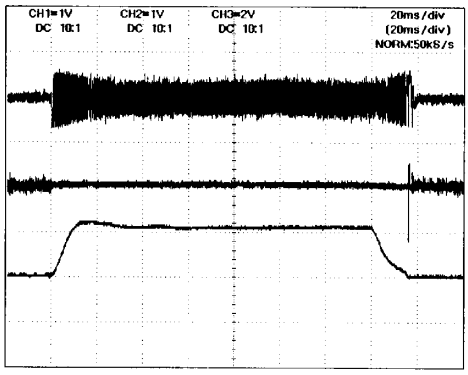


Traverse seek (5,000 tracks)

Toward outer tracks

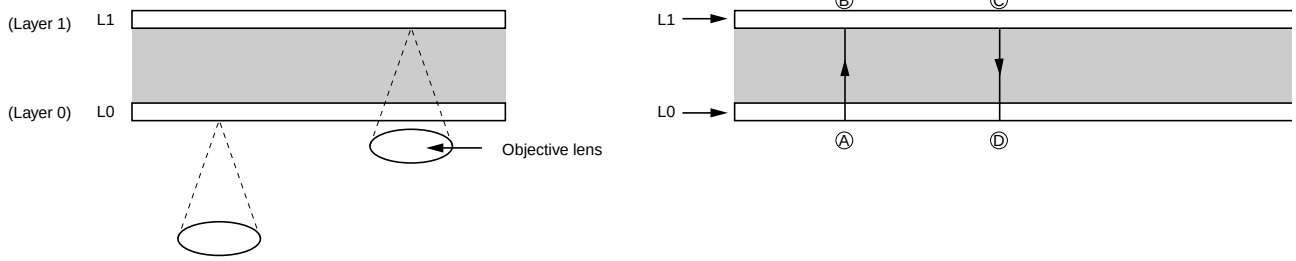


Toward inner tracks



1.2.4 Focus jump

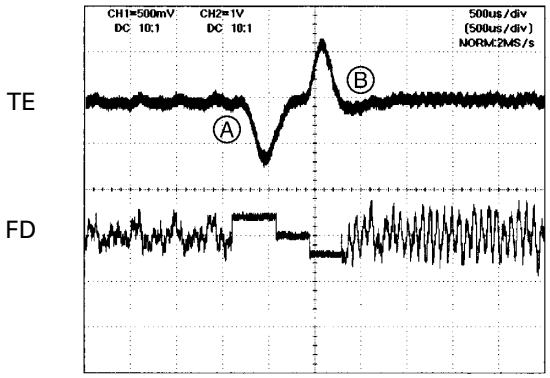
Focus jump is used for single-sided, double-layered or double-sided, double-layered discs. The layer closest to the objective lens is called layer 0 (L0), and the other layer is layer 1 (L1).



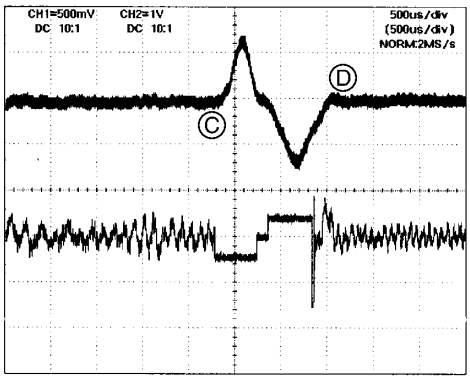
The waveforms in the focus jump mode are shown below:

Focus jump waveform

L0→L1



L1→L0



The focus-jump operation flow is described below:
1. The tracking loop is unlocked on the layer that is being played.
2. A jump command is issued to jump to the targeted layer.
3. The tracking loop closes on the targeted layer and reproduction starts.

The detailed processes after a jump command is issued are as follows:
1. The pickup lens is accelerated towards the target layer until the FE signal detects the focus jump acceleration completion level. If the acceleration timeout occurs before the acceleration completion level is detected, the acceleration is forcibly terminated.
2. No drive voltage is applied until the FE signal detects the deceleration starting level, and the lens is kept moving by the inertia.
3. With the deceleration starting level detected, the lens starts decelerating, and continues it until the deceleration completion level is detected. If the deceleration timeout occurs before the deceleration completion level is detected, the deceleration is forcibly terminated.

1.3 Automatic adjustment functions

This system automatically performs all circuit adjustments by combined operations of the ICs AN8703FH (FEP) and MNZS26EDCUB (SODC). Each automatic adjustment function is explained below:

1.3.1 FE, TE and AS offset cancel

The analog signals FE, TE and AS, generated by the FEP, are A/D-converted by the A/D converter inside the SODC. When the power is turned on, the offset cancel works to cancel the input offset of the A/D converter.

1.3.2 Data slice balance (DBAL) adjustment

The DBAL adjustment is made to adjust the data-slice level that is used when the RF signal from the FEP is converted to a binary signal in the SODC. When the power is turned on, the test signal of the constant frequency is output from the SODC and the jitter component of the signal is adjusted to the minimum.

•In the same manner as the above, the PLL balance (PBAL) adjustment is made to optimize the current level balance between the P-ch and N-ch sides of the chargeable pump.

1.3.3 FE regulating adjustment

The FE signal level measured when the focus loop is closed is A/D-converted in the SODC. Then it is adjusted so that it becomes 190LSB at the input stage of the digital equalizer.

1.3.4 Spindle gain learning

The time is measured that is required for the spindle motor to start rotating in the stop mode and reach the prescribed rotation. The measured time is used to adjust the SPDL gain, thereby absorbing the variation in the motor torque.

1.3.5 Tracking balance (TBAL) adjustment

In the focus close and tracking open mode, the lens is vibrated in the tracking direction. The tracking balance is adjusted so that the DC offset becomes zero (the balance point) by using the Newton-Raphson's method.

1.3.6 Tracking error amplitude learning

In the focus close and tracking open mode, the lens is vibrated in the tracking direction. After A/D-converted in the ADSC, the amplitude level of the TE signal is adjusted so that it becomes 190LSB at the input stage of the digital equalizer.

1.3.7 Focus balance (FBAL) adjustment

In the tracking close mode, the focusing position is adjusted by minimizing the RFENV.

1.3.8 Focus gain and tracking gain adjustments

In the tracking close mode, some disturbance signal is applied to the servo loops. The focus and tracking gains are adjusted to the target gain cross points.

1.3.9 AS regulating adjustment

In the tracking close mode, the AS signal level is sampled the prescribed times. After A/D-converted in the ADSC, this signal is adjusted so that it becomes 64LSB at the input stage of the digital equalizer.

For each automatic adjustment, the adjustment results can be displayed in the test mode for verification.

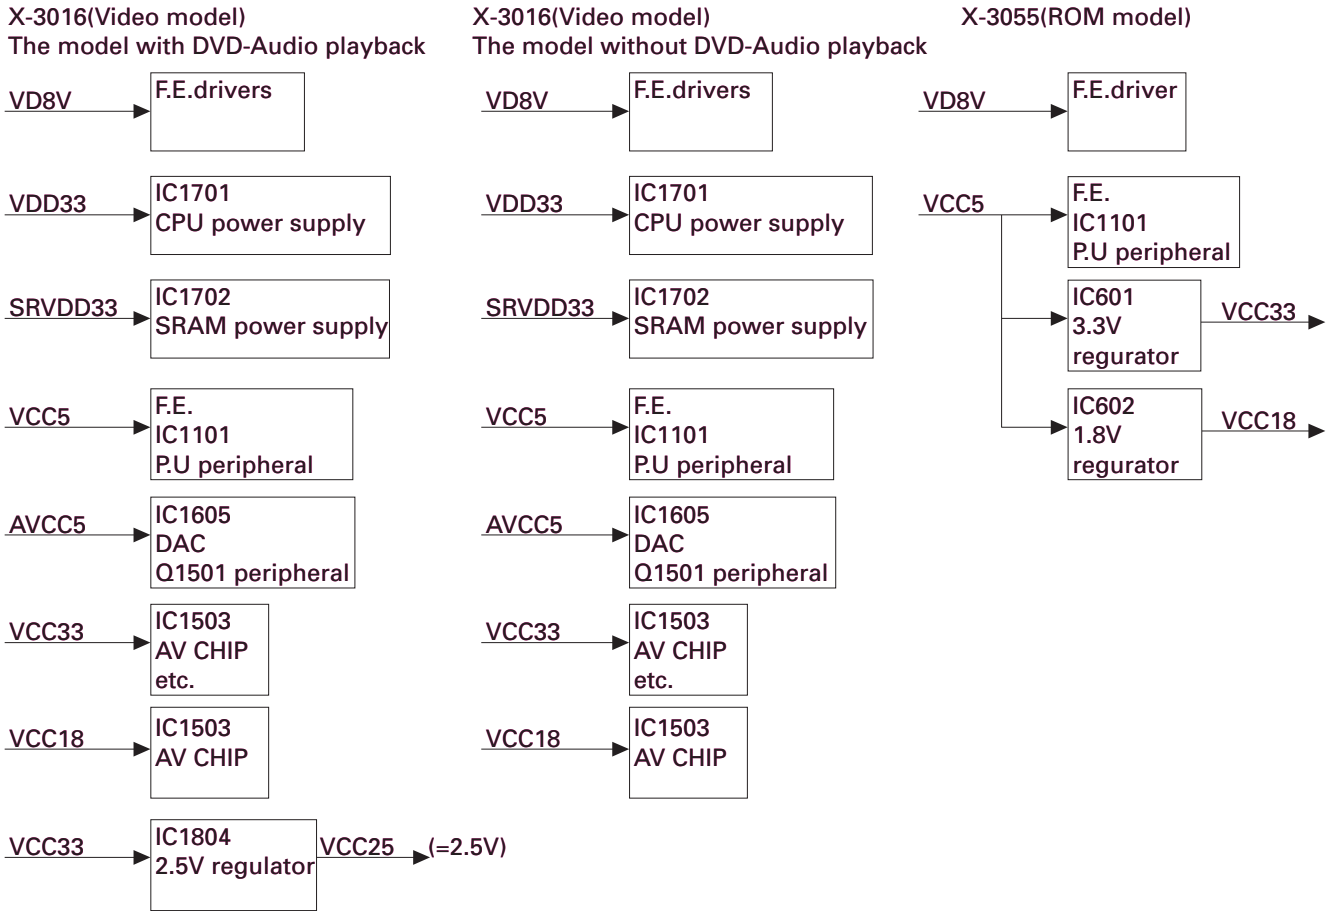
Notes:
The coefficient values are indicated in the hexadecimal system.
The specifications shown above are for the production line.
The used discs are DVD-REF-A1 and TCD-782 for DVDs and CDs respectively.

1.4 Back-end section

As described before, in the front-end processor and optical disc controller, the data is read out from a disc, and processed for demodulation and error correction.
Here in the back-end section, thorough the MPEG decoding, compressed audio decoding and other processing, the data is output as video and audio signals.
The back-end section, including the microcomputer, its peripheral circuits, and power supply, is explained below:

1.4.1 Back-end power supply

The back-end power supply for each model is shown below.
The video-type model with DVD-Audio reproduction function has the 2.5V internal regulator, but the video-type model without DVD-Audio reproduction function does not. The ROM-type has a different power supply circuit from those for the video-type models.



Power supply configuration

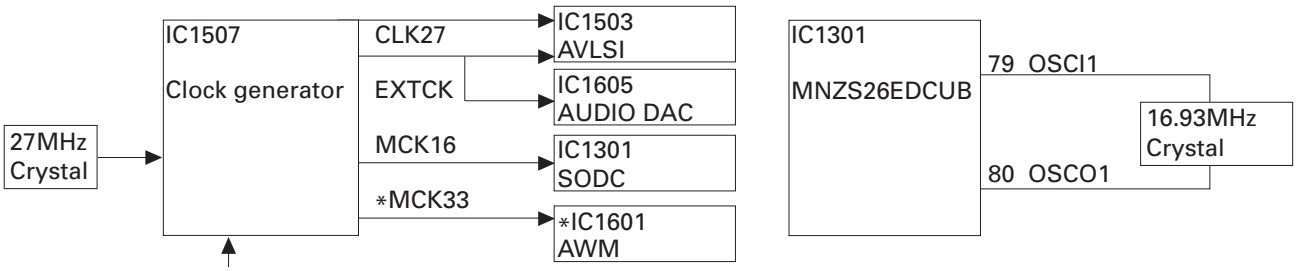
1.4.2 Back-end clock section

For the Video-type models:

An oscillating crystal of 27MHz is used to generate the 27MHz buffer-out (CLK27), audio section clock (EXTCK), and front-end section clock (MCK16) signals by the IC1507.

For the ROM-type model:

An oscillating crystal of 16.93MHz is used to generate the front-end section clock (MCK16) signal by the IC1301.



*MCK33:The model with DVD-Audio playback

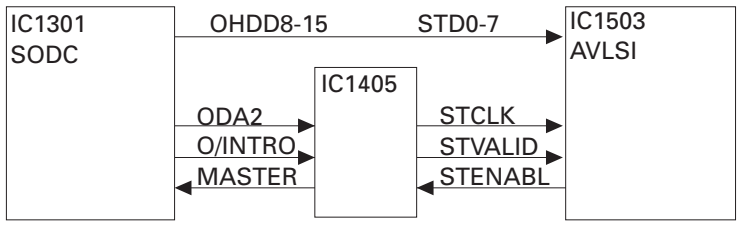
Clock configuration

1.4.3 Back-end stream I/F section (only for the video-type models)

This section functions as an interface to transfer the data read out in the front-end section, between the SODC and the back-end section.

For DVDs, this section transfers MPEG data, which is generally called MPEG stream. Therefore, the I/F section is called stream I/F.

Note that the signals are given different names between the IC1301 SODC and IC1503 AVLSI.



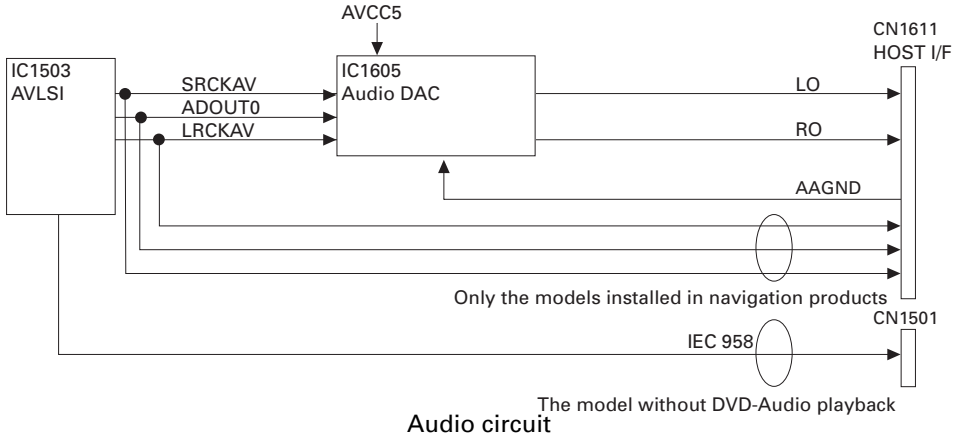
Streaming I/F

1.4.4 Back-end audio circuit section (only for the video-type models)

The three serial audio signals, output from the AVLSI, are applied to the IC1605 (Audio DAC), where they are converted into analog audio signals. These analog signals are output from the HOST I/F.

Only for the models installed in navigation products, after output from the AVLSI, the same serial signals are directly put out from the HOST I/F.

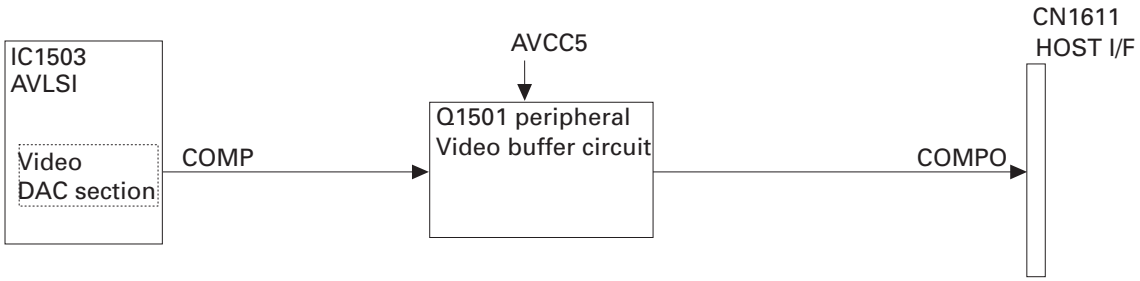
The IEC958 (audio/digital out) is available only for the model without DVD-Audio playback function.



Audio circuit

1.4.5 Back-end video circuit section (only for the video-type models)

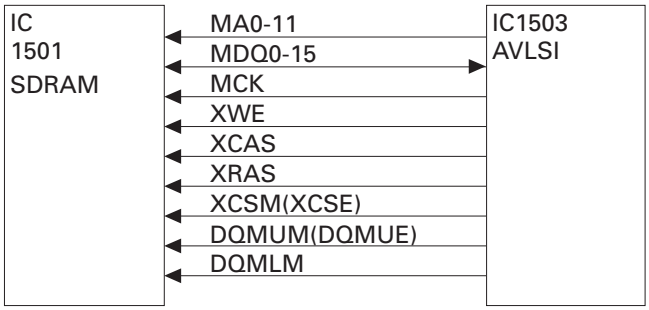
The composite video signal from the video DAC circuit inside the AVLSI is output from the HOST I/F via the video buffer circuit.



Video circuit

1.4.6 Back-end SDRAM I/F section (only for the video-type models)

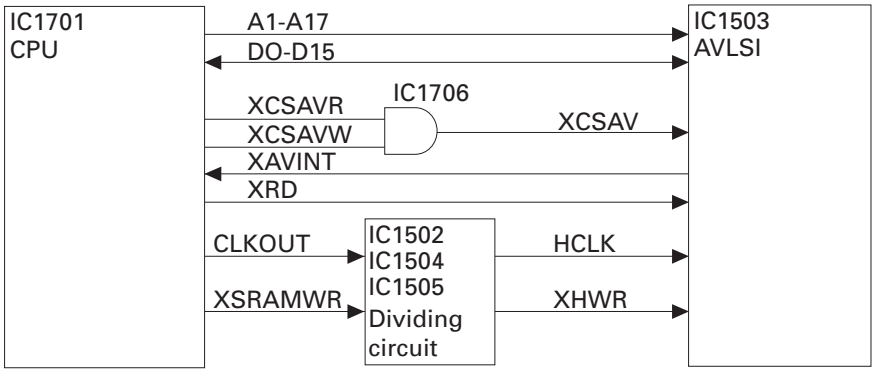
For the SDRAM, which functions as the communication I/F between the AVLSI and the memory, a 64Mbit IC has employed to secure the MPEG stream dada buffer.



SDRAM interface

1.4.7 Back-end microcomputer I/F section (only for the video-type models)

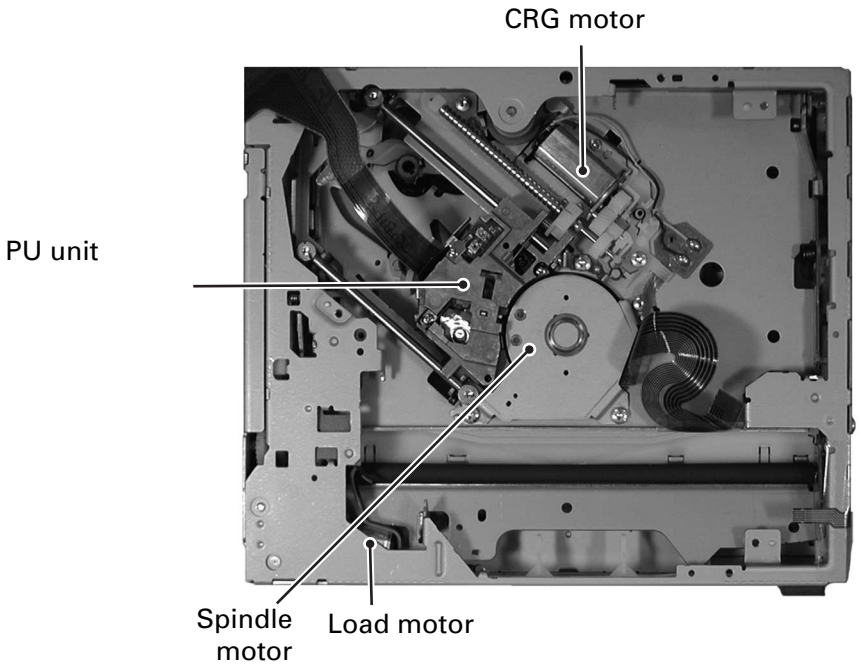
This section works as a communication interface between the AVLSI and the CPU.
In order to match the operating frequency for the CPU with that for the AVLSI, a frequency dividing circuit is inserted as shown below.

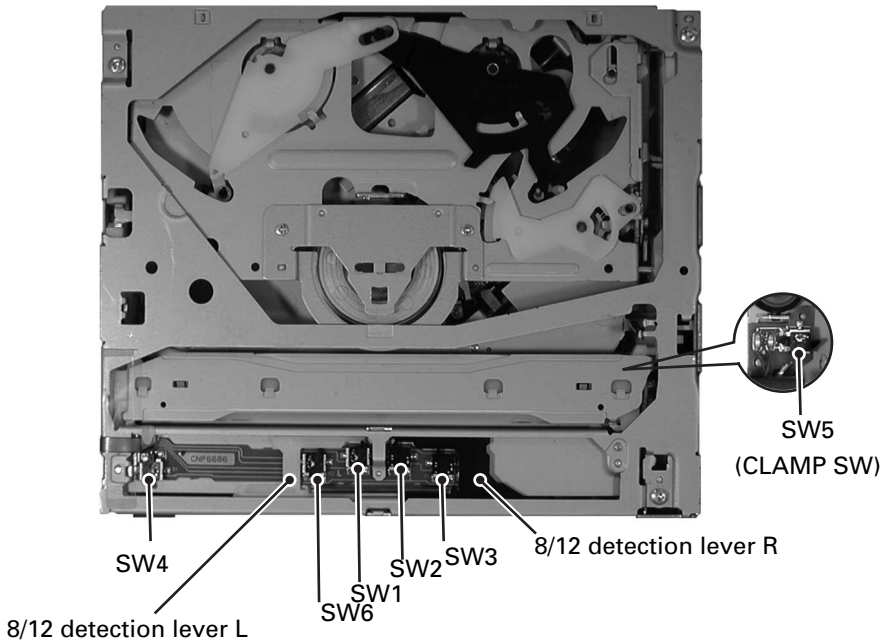


Microcomputer interface

2. Mechanism descriptions

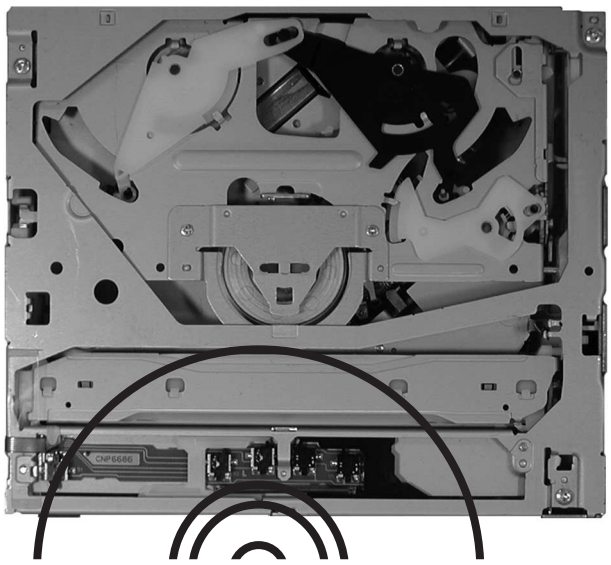
Configuration





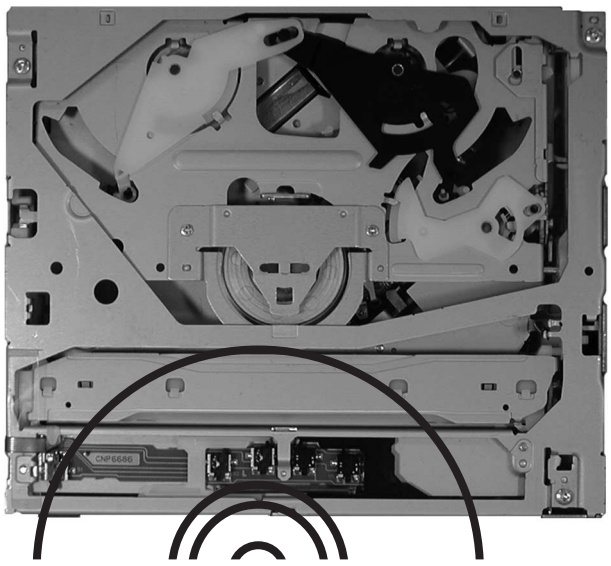
2.1 Disc loading operation

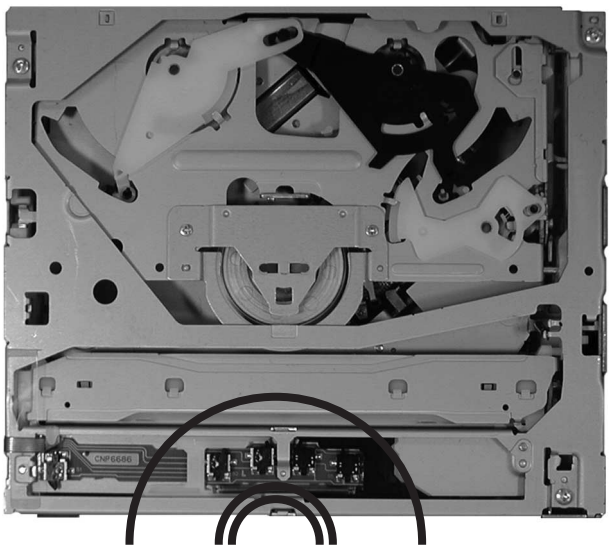
1. When a disc is inserted, the 8/12-detection levers R and L slide. Either of the switches SW1 and SW2 is shifted from ON to OFF, which triggers the operation of the loading motor.
2. For a 12cm disc, the switch SW3 is turned OFF and SW4 is ON during disc transportation. The microcomputer senses that a 12cm disc is loaded.



12 cm disk

3. For an 8cm disc, neither the switch SW3 nor SW4 will be shifted to the above states (SW3: OFF, SW4:ON) during disc transportation. The operation mode proceeds to the clamp operation. The microcomputer senses that an 8cm disc is loaded.

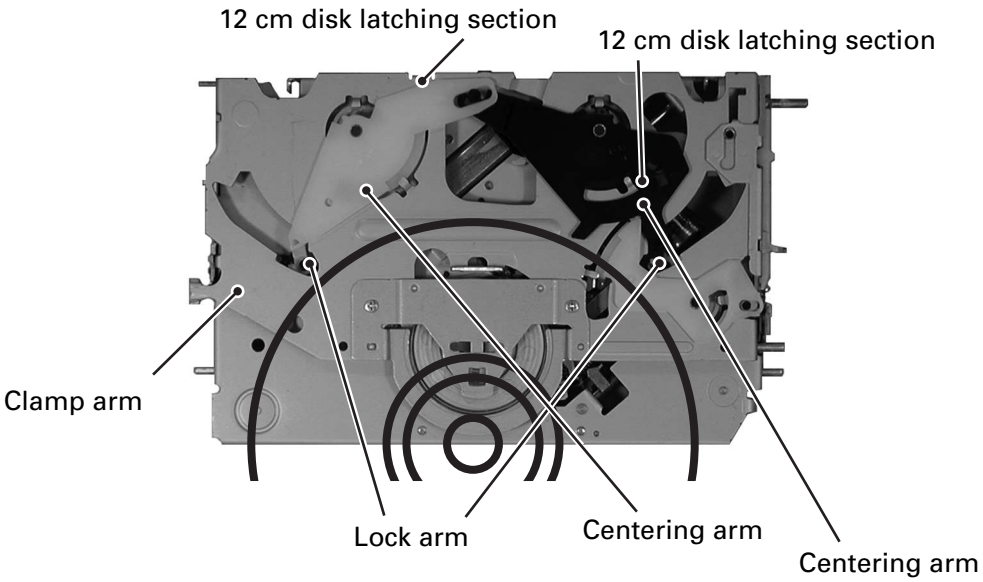




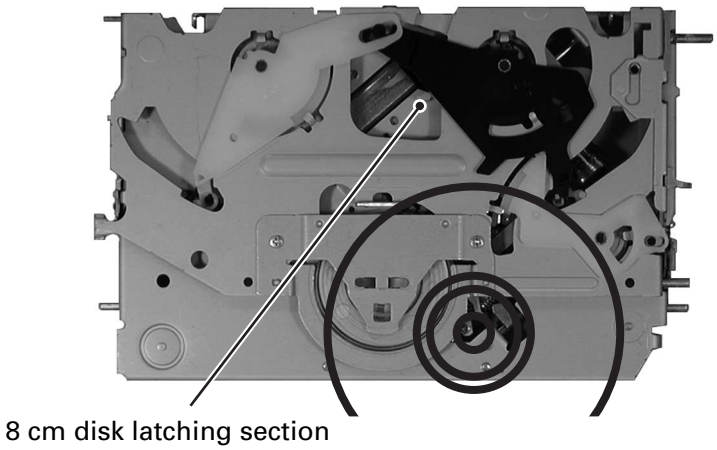
8 cm disk

2.2 Disc centering mechanism

1. With a 12cm disc loaded, the disc pushes both of the lock arms R and L to open the centering arms R and L. Then, the clamp arm or the stopper of the centering arm R stops the disc for centering. The operation mode proceeds to the clamp operation.

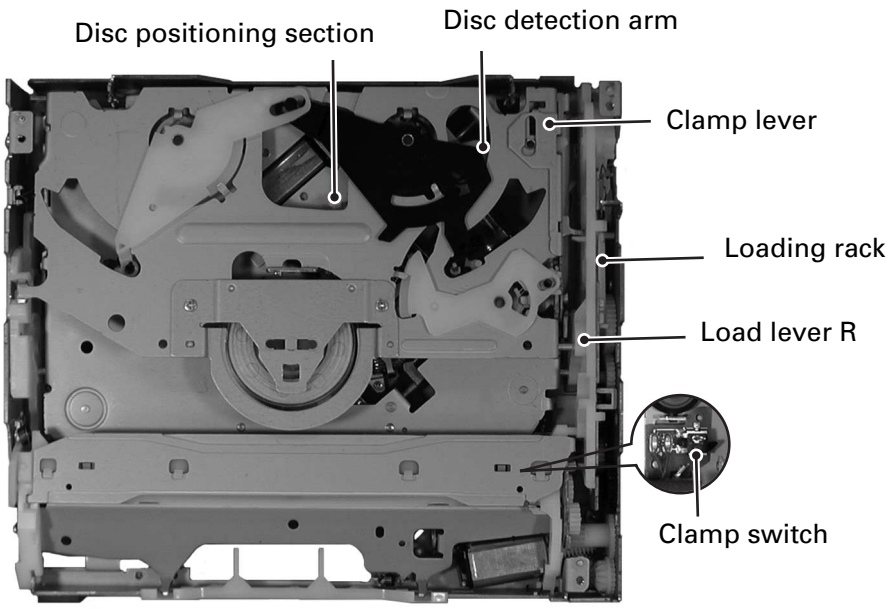


2. With an 8cm disc loaded, the disc pushes either of the lock arms R and L. The lock arms R and L are connected each other via the centering arms R and L. The lock arms R and L will be kept locked unless the disc pushes them at the same time. Therefore, the lock arm blocks the disc for centering. During disc centering, the disc pushes out the disc detection arm. When the detection arm completes moving, the disc stops. The operation mode proceeds to the clamp operation.

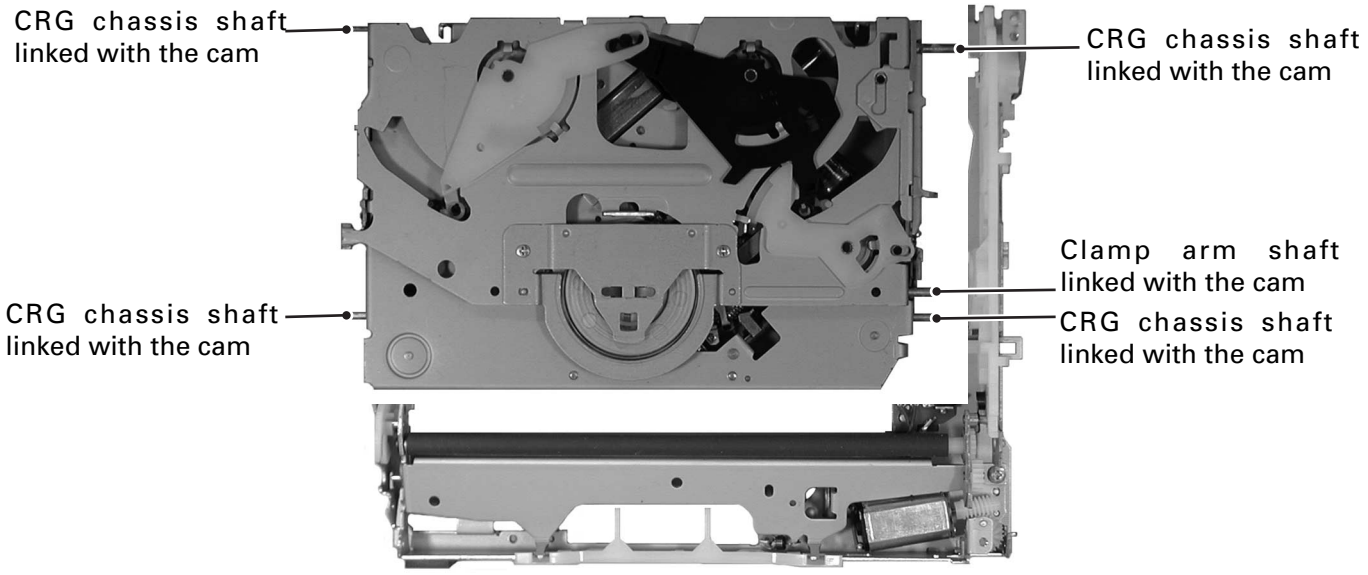


2.3 Clamp operation

1. When an 8 or 12 cm disc is centered over the spindle, the disc detection arm moves the clamp lever. The loading rack driven by the clamp lever is engaged with the lever driving gear, which triggers the disc clamp operation.



2. When pressed by the loading rack, the load lever R moves toward the front side, and the roller shaft, which is connected to the cam of the load lever R, moves downward. The roller shaft is connected to the cam of the cam ring also. Therefore, the drive of the roller shaft is transferred to the load lever L via the cam ring. The load lever L moves toward the front side. The load lever cams are released from the three shafts for the CRG chassis unit and the clamp arm shaft. When the load lever R turns on the clamp switch, the clamp operation ends.



2.4 Eject operation

1. When the loading motor turns in reverse, the disc eject operation begins.
2. With a 12cm disc loaded, when the SW4 is shifted from OFF to ON, and then OFF again, the eject operation ends.
3. With an 8cm disc loaded, when the SW3 or SW 6 is shifted from ON to OFF, and then both switches are turned ON, the eject operation ends.

3. Disassembly

● Precautions on handling the mechanism module

1. Hold the upper and main frames.
2. Do not hold the front portion of the upper frame. It is a delicate part.
3. Do not touch the switches on the top panel.
4. Be careful not to catch the flexible cables.

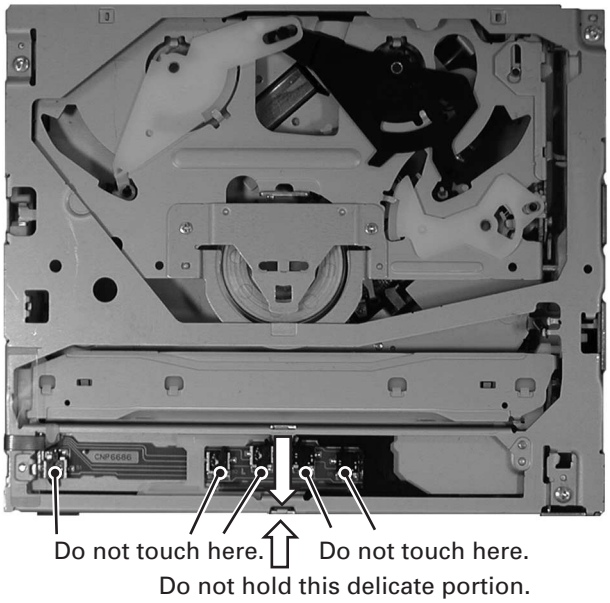


Fig. 1

● Removing the module pc board (fig.2 and 3)

1. Set the mechanism to the lock position (disc load standby position).
2. Place the mechanism module upside down.
3. Short the two lands on the pickup flexible cable as shown below.
4. Be sure to disconnect the pickup flexible cable and the CRG flexible cable from the connectors to protect them from damages.
5. Remove solder from the load motor leads and clamp SW leads.
6. Loosen the two fixing screws. Lift the position A of the module pc board lightly and move it in the direction B to remove it. Be careful not to damage the flexible cable C.
7. Disconnect the 8/12 detection flexible-cable from the connector.

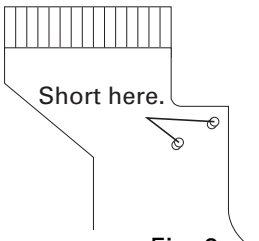

Fig. 2

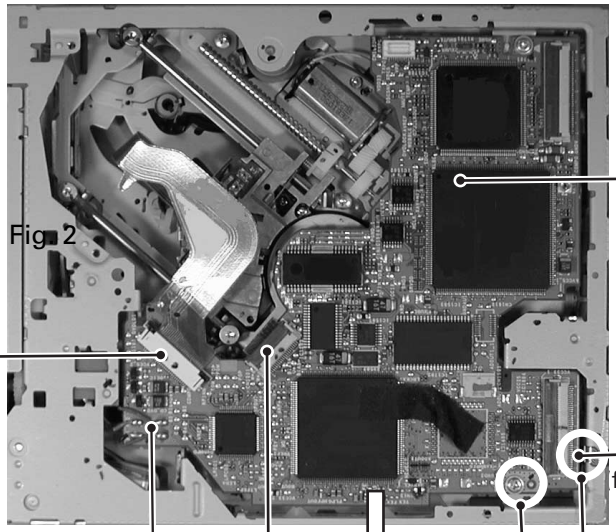

Fig. 3

● Removing the pickup unit (fig. 4))

1. Remove the module pc board in accordance with the procedure of "Removing the module pc board."
2. While holding the pickup case, remove the skew screw (main).
3. Lifting the end of the pickup rack, slide the main shaft, and remove the pickup unit.

Notes:

Replacing the pickup unit requires the skew adjustment.

Remove glue from both ends of the main and sub shafts, and skew stud.

Do not reuse the old skew screw. Be sure to use a brand-new skew screw supplied with a new pickup unit.

Fix the skew screw with glue (GYL1001) after adjustment.

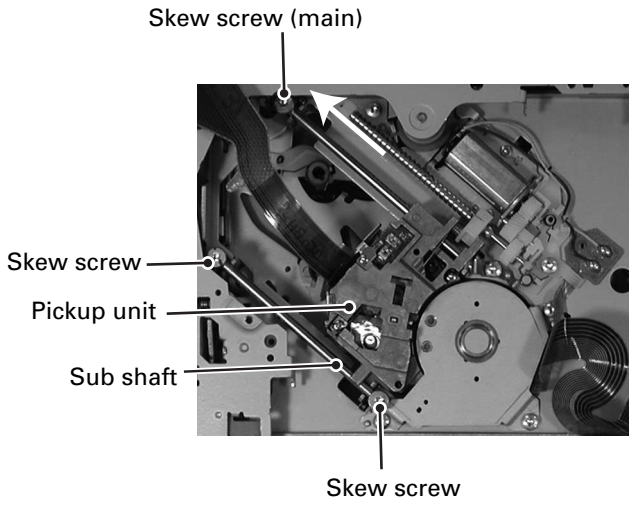

Fig. 4

● **Removing the CRG motor ASSY (fig.5)**

1. Remove the module pc board in accordance with the procedure of "Removing the module pc board."
2. Release the CRG motor leads from the resin guide and remove the CRG flexible cable from the land.
3. Remove the fixing screw, and remove the feed screw holder together with the 2-stage gear.
4. Remove the fixing two screws and CRG motor ASSY.

Caution: When replacing the CRG motor ASSY, be careful not to damage the gears, especially the 2-stage gear that is very delicate. When lifting the pickup rack to install the motor, be careful not to damage the gear teeth.

● **Removing the spindle motor (fig.5)**

1. Remove the module pc board in accordance with the procedure of "Removing the module pc board."
2. Release the CRG motor leads from the resin guide and remove the CRG flexible cable from the land.
3. Remove the three fixing screws for the SPDL motor. Be careful not to deform the CRG chassis when replacing the SPDL motor.

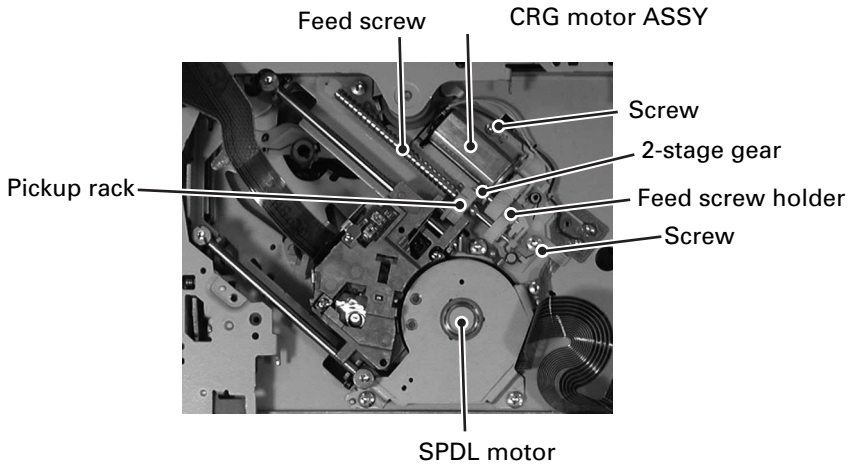

Fig. 5

● **Removing the upper frame ASSY (fig. 6)**

1. Remove the module pc board in accordance with the procedure of "Removing the module pc board."
2. Remove the spring.
3. Remove the four screws and remove the upper frame ASSY.

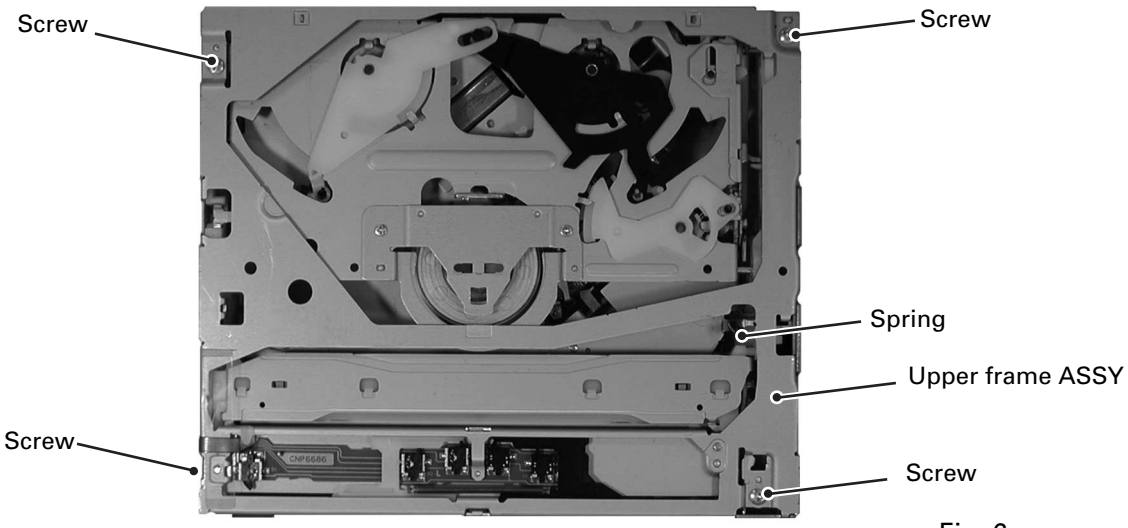

Fig. 6

● Removing the load gear ASSY (fig. 7)

1. Remove the module pc board in accordance with the procedure of "Removing the module pc board."
2. Remove the upper frame ASSY in accordance with the procedure of "Removing the upper frame ASSY."
3. Remove the two screws and remove the load gear ASSY.
4. Remove the loading rack and the spring.

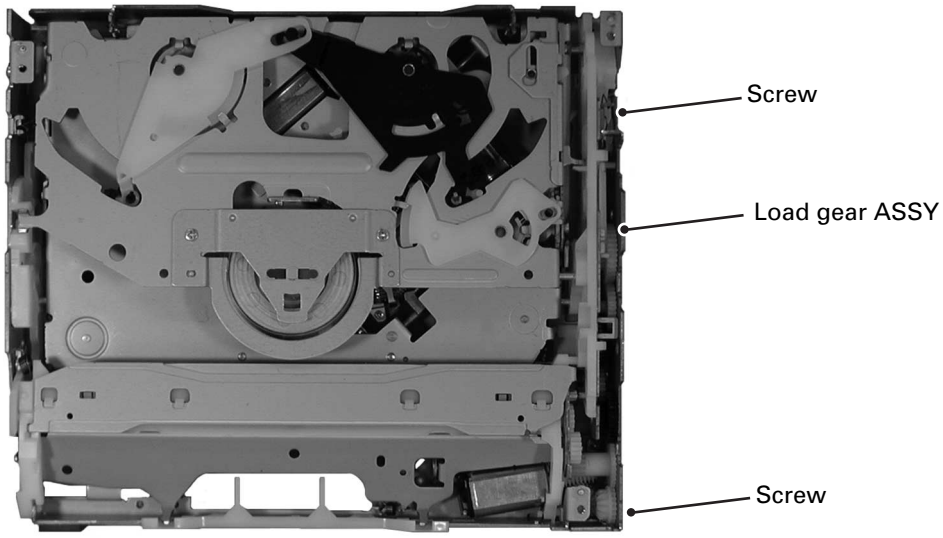

Fig. 7

● Setting the quasi-clamp mode by driving the loading motor (fig. 8)

1. While driving the loading motor in the clamping direction, pull the clamp lever toward the front side.
2. Even after the clamp lever pushes the loading rack (clamp mode), keep the clamp lever pulled lightly. Prevent the clamp lever bar ring from coming into the clamp spring. If not, ejection will not be impossible.
3. After the clamp operation ends, stop the operation before the objection of the loading rack touches the load lever R. (fig. 10)

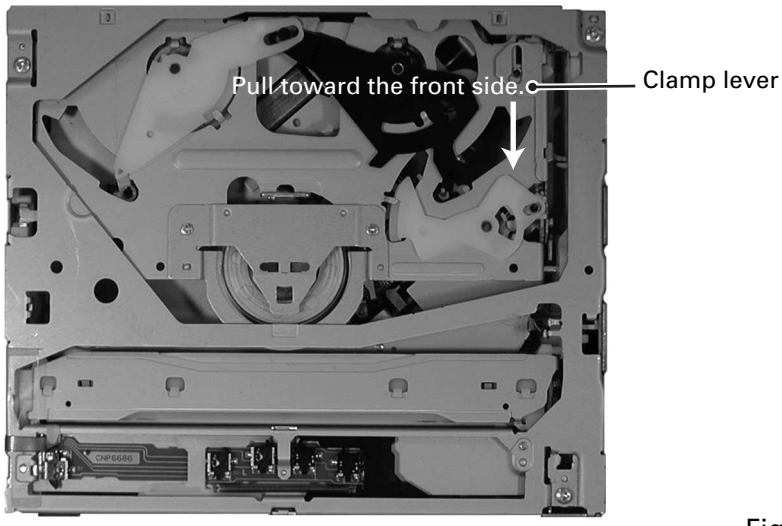

Fig. 8

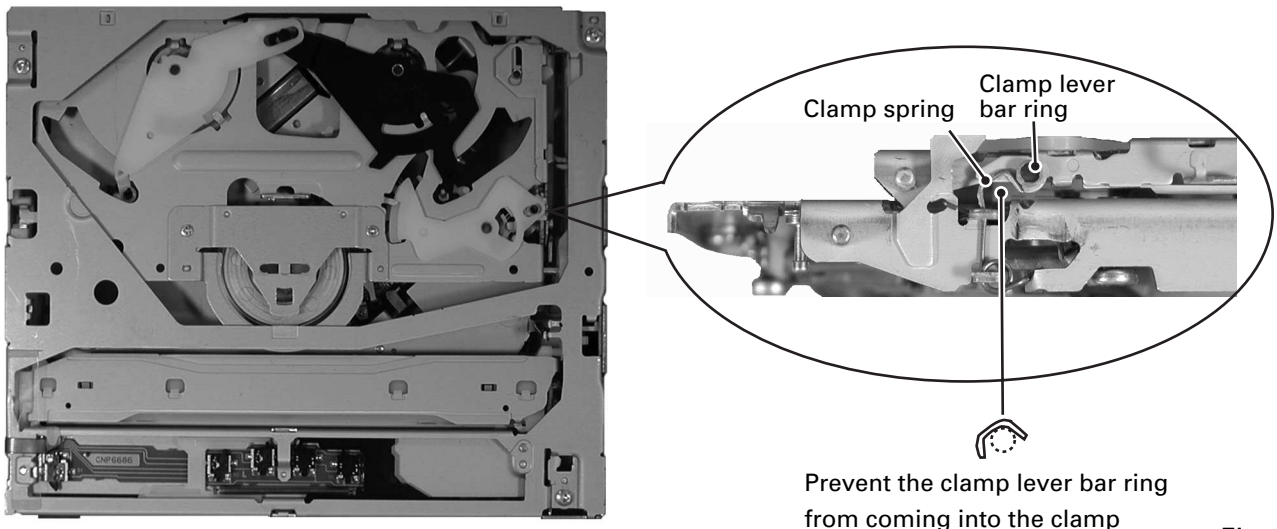

Prevent the clamp lever bar ring from coming into the clamp spring (the above condition is NG)

Fig. 9

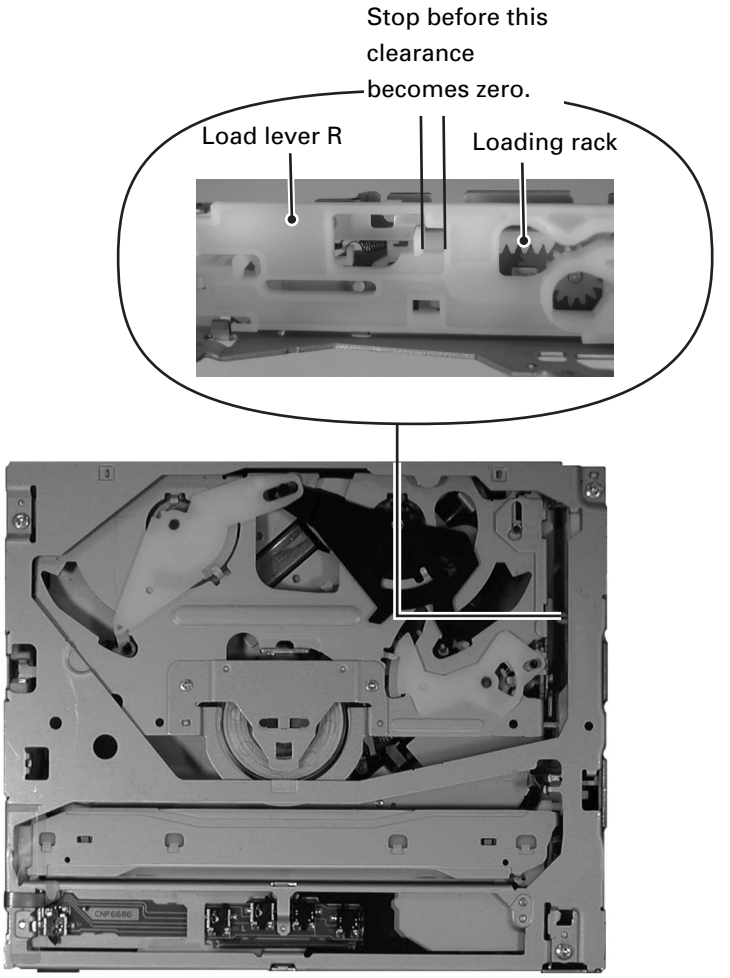

Fig. 10

● Setting the quasi-clamp mode manually (fig. 11)

1. Remove the module pc board in accordance with the procedure of "Removing the module printed circuit board."
2. Remove the upper frame ASSY in accordance with the procedure of "Removing the upper frame ASSY."
3. Remove the load gear ASSY in accordance with the procedure of "Removing the load gear ASSY."
4. While pulling the clamp lever toward the front side, pull the fixed portion of the load lever R toward the front side until the mode enters the clamp position.

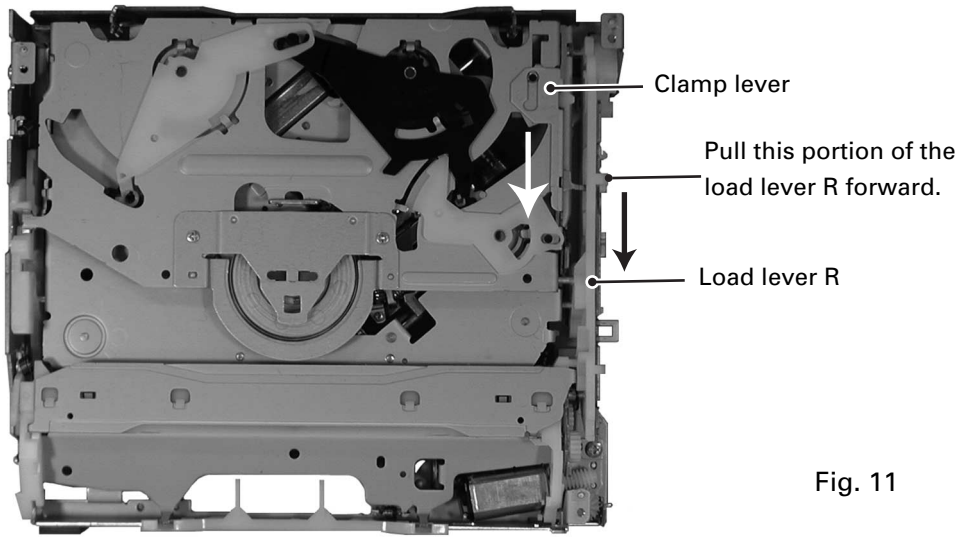

Fig. 11

● Removing the load motor ASSY (fig. 12)

1. Remove the module pc board in accordance with the procedure of "Removing the module printed circuit board."
2. Remove the upper frame ASSY in accordance with the procedure of "Removing the upper frame ASSY."
3. Remove the load gear ASSY in accordance with the procedure of "Removing the load gear ASSY."
4. Enter the quasi-clamp mode in accordance with the procedure of "Setting the quasi-clamp mode manually."
5. Remove the screw. Slide the load motor ASSY to pull it out.

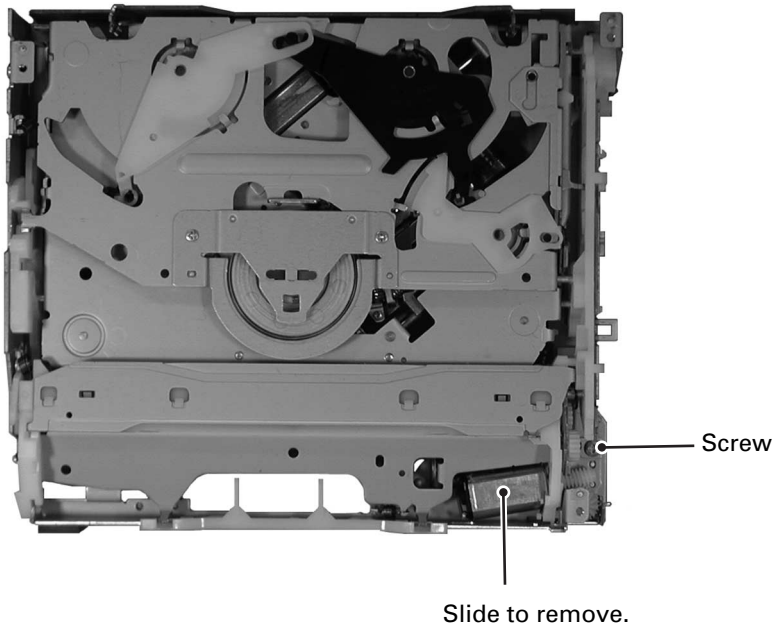

Fig. 12

● **Removing the CRG ASSY (fig. 13)**

1. Enter the quasi-clamp mode in accordance with the procedure of “Setting the quasi-clamp mode by driving the loading motor.”
2. Remove the module pc board in accordance with the procedure of "Removing the module pc board.”
3. Remove the upper frame ASSY in accordance with the procedure of "Removing the upper frame ASSY.”
4. Remove the four springs.
5. Lift the CRG ASSY until the shafts come from the dampers, and then remove it.

● **Removing the disc guide ASSY (fig. 13)**

1. Enter the quasi-clamp mode in accordance with the procedure of “Setting the quasi-clamp mode by driving the loading motor.”
2. Remove the module pc board in accordance with the procedure of "Removing the module pc board.”
3. Remove the upper frame ASSY in accordance with the procedure of "Removing the upper frame ASSY.”
4. Remove the two disc guide springs. While lifting the disc guide and keeping the lifting angle around 45 degrees, slide the guide in the left side to remove it.

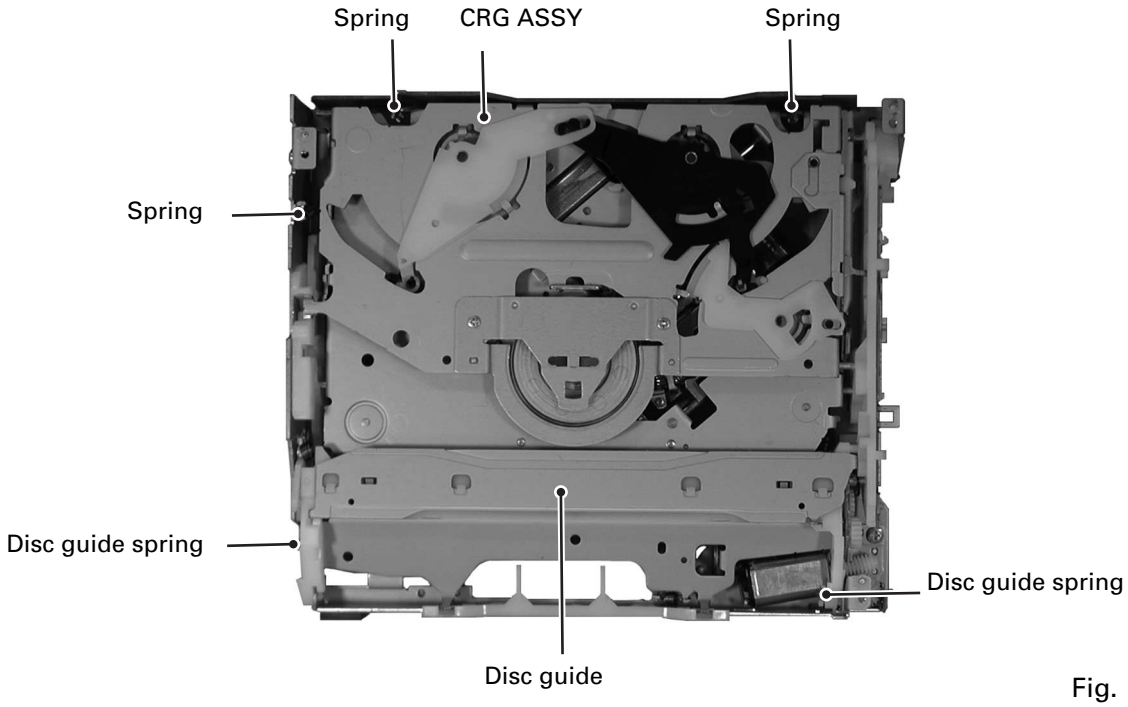

Fig. 13

● **Removing the roller ASSY (fig. 14)**

1. Remove the module pc board in accordance with the procedure of "Removing the module pc board."
2. Remove the upper frame ASSY in accordance with the procedure of "Removing the upper frame ASSY."
3. Remove the tension spring.
4. Remove the load gear ASSY in accordance with the procedure of "Removing the load gear ASSY."
5. Enter the quasi-clamp mode in accordance with the procedure of "Setting the quasi-clamp mode manually."
6. Remove the disc guide ASSY in accordance with the procedure of "Removing the disc guide ASSY."
7. Remove the CRG ASSY in accordance with the steps 4 and 5 in the procedure of "Removing the CRG ASSY."
8. By pushing the fixed portion of the load lever R, move the load lever R to the rear side completely.
9. Remove the load levers R and L. Unhook the end of the roller arm spring R from the load lever R.
10. While lifting the roller ASSY to the highest position, slide it to the right side. Lightly bend the whole slot guide by pushing the ends with your fingers and remove the roller ASSY.

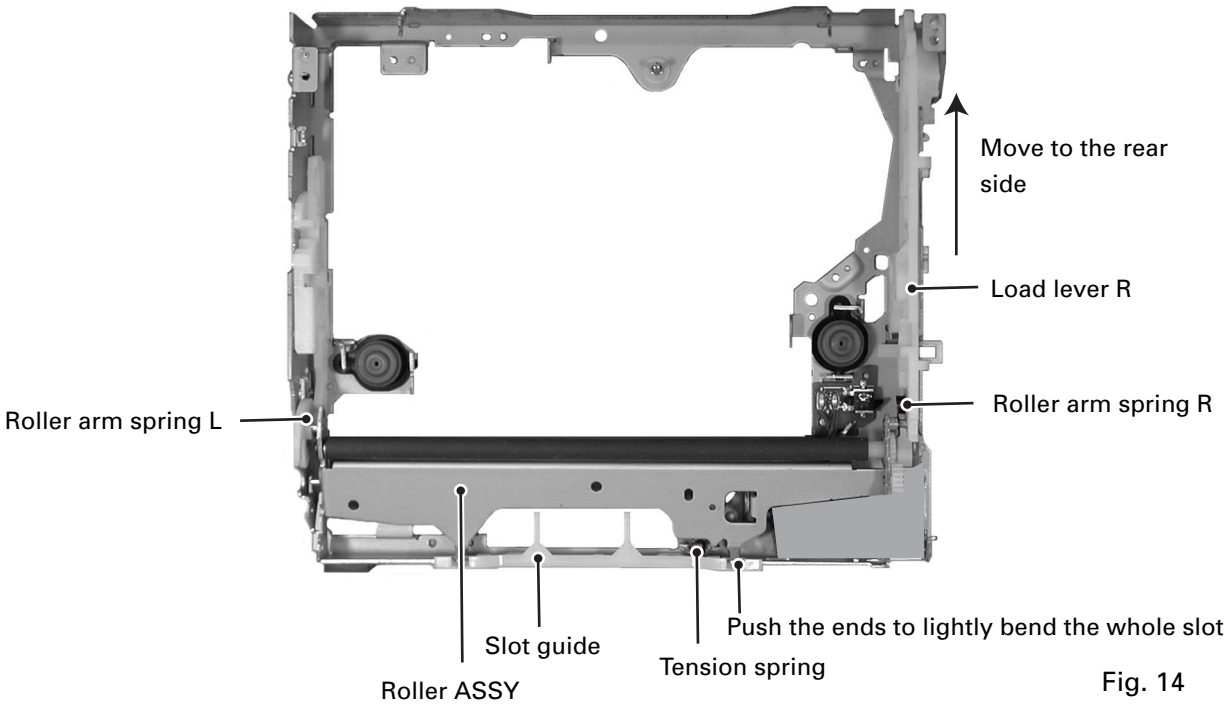

Fig. 14

● **Removing the dampers (fig. 15)**

1. Enter the quasi-clamp mode in accordance with the procedure of “Setting the quasi-clamp mode by driving the loading motor.”
2. Remove the module pc board in accordance with the procedure of "Removing the module pc board.”
3. Remove the upper frame ASSY in accordance with the procedure of "Removing the upper frame ASSY.”
4. Remove the three springs.
5. Remove the CRG SSSY in accordance with the steps 4 and 5 in the procedure of "Removing the CRG assembly.”
6. Release each of the three dampers from the clinches as follows:
   - 6.1 By using a pair of pliers, hold the portion A and turn them in the direction B. While making a gap in the portion C, release the damper from the clinches.
   - 6.2 Insert a flat-type screwdriver into the portion D. Slightly raise the plate and release the damper from the clinches.
7. Remove the CRG motor ASSY in accordance with the steps 2 through 4 in the procedure of "Removing the CRG motor ASSY.”
8. Remove the dampers.

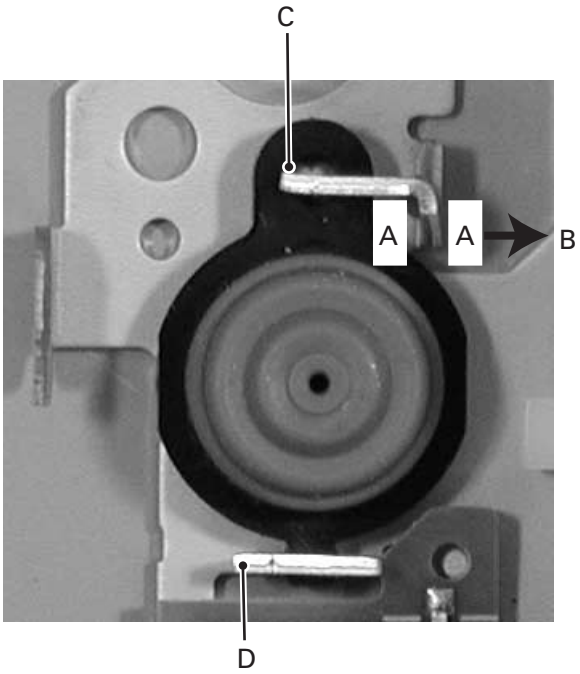

Fig. 15
